Welcome to Utrecht Summer School

2021 is a lustrum year for Utrecht University (385 years), the University Medical Centre (20 years) and the Utrecht Summer School (35 years). All the more reason for me to be excited about the new Summer School programme! This year, we will once again offer about 200 academic summer courses across the disciplines, to students and professionals from all over

the world, and at every level from Bachelor to Postdoc. We find that people come to us to broaden or deepen their knowledge, gain new insights or to update their skills.

In 2019, the Utrecht Summer School attracted around 4,000 students to its short and intensive summer courses. In Covid-19 year 2020, we still managed to organise over 60 online events in which more than 1200 people participated. We are extremely happy to continue our long-lasting co-operation with the Hogeschool Utrecht (University of Applied Sciences Utrecht) and with the Hogeschool voor de Kunsten Utrecht (University of the Arts Utrecht), whose courses are integrated in our overall programme. Additionally, we foster collaboration with our international partners in higher education. They enable us to host courses not only here in Utrecht but also in European cities such as Rome, Florence, Tallin, Riga and Berlin.

I hope you will enjoy browsing through this brochure, which, you will find, is likely to contain something of your interest. I look forward to seeing you in Utrecht this summer.

Prof. dr. Henk Kummeling Rector Magnificus of Utrecht University

It is with great pleasure that I present the summer programme for 2021 to you. This year we celebrate 35 years of Utrecht Summer School. It all started in 1986, with a course on Dutch culture, tailor-made for students from international partner universities. Today, Utrecht Summer School encompasses about 200 courses in a diverse range of disciplines, at all academic

levels. Our programme attracts students of all ages, from all backgrounds, and from all over the world.

In this festive year too, we offer many unique options, ranging from art and culture, to statistics, business, health care, data science and linguistics. Our courses deal with important contemporary subjects such as the Financial Crisis, Sustainability, European Politics, Game Research, Data Science, Global Health, Neuroscience and many more. Whether you are a PhD medical student, a bachelor student with a keen interest in business, or a professional wanting to learn more about conflict management, we are likely to have a course that suits your needs.

This annual brochure lists most of our courses, including course descriptions and information on target groups and entry requirements. Normally about 4,000 students enrol in one of the many Utrecht Summer School intensive summer modules, and a number of course participants even choose to take a combination of two or three courses. We attract both new and returning students.

You will always find the most up-to-date and comprehensive information on our website: www.utrechtsummerschool. nl. And don't forget to follow us on social media. We look forward to seeing you on one or more of our programmes this summer!

Bettina Nelemans, MA Director Utrecht Summer School

Courses ordered by discipline and target group

CULTURE

	Bachelor
	The Making of Europe
	European Encounters: The Baltics in the European Union
-	European Politics and Economy
	European Cultures and Identities
	Discovering the Dutch: Dutch Culture and Society
	Dutch Culture: Society and Current Issues
	Dutch Culture: History and Art
	Dutch Culture in a European Context
	Estonia: Economic Innovation and Baltic Regional Security
	Latvia: The Baltic States and its Neighboring Powers
	European Encounters: Diversity and Integration from West to East
	Founding Europe: From Antiquity to the 19th Century
	The Making of Europe: Rise of Civilization
	The Rise of Modern Europe
	The Making of Europe: The Long 20th Century
	The Making of Europe: From Middle Ages to Modernity
	Battlefields Uncovered
	Advanced Bachelor
	Exploring Culture through Data: Digital methods & Data practices
	Introduction to Intercultural Communication
-	Research Methods in Intercultural Communication
	Master
-	Old Catholic Theology in its Ecumenical Context
_	Old Catholic Theology & The Early Church
	Advanced Master
-	The Early Church as Ideal
-	The Posthuman & New Materialism

ART & MUSIC

Bachelor

	History of Art: A Thousand Years of European Highlights	28
	The Art of the Renaissance in Florence and Rome	28
	Dutch Art of the Golden Age	29
	History of Art: Relations between Italy and the Netherlands	29
	Art in Germany from the Middle Ages to the 20th Century	30
	History of Art: Highlights in Germany and the Netherlands	30
	A Journey through Dutch Art	31
	Dutch Art from Mesdag to Van Gogh and Mondriaan (1700-1920s)	31
_	Composing Film Music for Beginners	33
	International Rhythm Course	33
_	Advanced Bachelor	
	From Print to Paint: Histories and Methods of Artistic Production	31

LIFE SCIENCES & HEALTHCARE

Bachelor

-	Rehabilitation in Physiotherapy and Allied Health Care	42
_	Interprofessional Collaboration in Stroke Management	43
-	Depression Management and Suicide Prevention	45
	Advanced Bachelor	
	Paediatric Sport and Exercise Medicine	41
	Advanced Clinical Research Monitoring Interactive Workshop	45

Master

Master	
Challenges in Global Health: Non-Communicable Diseases	36
Regenerative Medicine	38
Laboratory Animal Science	38
Advanced In Vitro Models	41
Future Food Studies	42
Childhood Cancer	45
Advanced Master	
Global Surgery & Obs-Gyn Summer School	36
Pharmaceutical Policy Analysis	
Pharmacoepidemiology and Drug Safety	37
Neural Circuit Development and Plasticity	40
3D Printing and Biofabrication	40
Post-academic	
Diagnostic Avian and Exotic Animals Pathology	38
LAW & ECONOMICS	
Bachelor	
Financial Law and New Technologies	50
Introduction to Public International Law	52
Introduction to the International Law of the Sea	52
Law and Sustainability	53
Advanced Bachelor	
International Human Rights Law: An Introduction	48
Highlights of Law and Economics	48
European Competition Law and Economics	49
Financial Law and Economics: The (Next) Financial Crisis and Europe	49
Current challenges in EU Law	50

European Competition Law and Economics	49	
Financial Law and Economics: The (Next) Financial Crisis and Europe		
Current challenges in EU Law	50	
Law and Economics	50	
Corporate Governance after the Financial and Covid-19 Crises	51	
Understanding and Managing Mergers and Acquisitions	51	
Advanced Master		
Professional Ethical Judgment for Global Transformations	53	

ENGINEERING & TECHNOLOGY

Bachelor		
Smart Sustainable Cities 50		
Introduction to Artificial Intelligence 57		
Advanced Bachelor		
Hands-on Process Mining 56		
Applying Ethics in Digital Innovation 58		
Business Process Management and IT 58		
Decision Management and Business Rules Management 58

The Netherlands

The Dutch combine history and traditional culture with innovation, modernism and an international orientation. While the Dutch like to emphasize their country's highly industrialised features, they have not let go of their historical background. They treasure the many old buildings and monuments that can be found in the centre of major Dutch cities, including Utrecht.

Geography

The Netherlands is situated in the west of Europe with its borders to Germany to the east, Belgium to the south and the North Sea to the north and west. This small country lies at a crossroad where German, British and French cultures meet. What strikes people most when they first arrive in the Netherlands is, apart from the enormous number of bicycles, its landscape: the country is extremely flat. While there are some hilly areas in the southeast corner of the country, these barely infringe on the broad, unbroken expanse of sky that is so characteristic of the Dutch landscape. Moreover, water can be found everywhere; in the form of lakes, rivers, canals and of course the sea. Parts of the Netherlands below sea level would be flooded if there were no innovative dikes, dunes and other fortifications. The Netherlands has a relatively small land area of slightly over 41.5 thousand square kilometres. With a population of over 17 million, the Netherlands is one of the most densely populated countries in the world.

Society

Dutch society consists of 190+ different nationalities living in its many cities and villages. For decades, the country's historical ties with other parts of the world have brought people of non-Dutch origin to settle in Holland, which has given the Dutch the reputation of being generally open-minded, freedom-loving and tolerant towards foreigners. This cultural diversity has made the Netherlands a place where knowledge, ideas and cultures from all over the world come together. Although Dutch is the national language, most of the population also speaks English and very often another foreign language, such as German or French.

The Netherlands or Holland?

The Netherlands is a kingdom, which is why its official name is the Kingdom of the Netherlands. It consists of the Netherlands together with the Caribbean islands: Aruba, Curaçao, and Sint Maarten. The country's name in Dutch is *Nederland*, meaning 'low country' and refers to the fact that much of the land is at or below sea level. The Netherlands is often referred to as *Holland*, a name that is derived from the names of two western coastal provinces, North and South Holland. These provinces were the most developed and wealthiest parts of the country in the 17th century and they played a dominant role in the country's history. This means that, although widely used, the name *Holland* is not completely accurate.

Utrecht

The history of the city and the name Utrecht goes back to 47 AD when the Roman emperor Claudius ordered his general Corbulo to build a defensive line along the river Rhine, which was the most northern border of the empire. One of the strongholds (or castellum) along the river was built at a crossing in the river and was called Traiectum (which means crossing place). In the local language this became Trecht, Uut-Trecht (lower-Trecht) and later Utrecht. At the place where once the castellum stood now stands the Dom Church built in the 13th century.

Nowadays, Utrecht is a lively city in the geographical centre of the Netherlands. It is not only an important junction where traffic, trade, distribution and services meet and mingle, Utrecht is also a true knowledge centre. Next to Utrecht University, HU University of Applied Sciences and HKU University of the Arts, the city is also home to important research institutes and several other institutions of higher education. With its 350,000 inhabitants, Utrecht is the fourth largest city in the Netherlands. With no less than 70,000 of the inhabitants being students, Utrecht is truly a student city.

Several canals crisscross the city and encircle the city centre. The Dom Tower is the focal point and pride of the city: with a height of 112 meters, it offers a magnificent view and is definitely worth visiting. To the south of the Dom is the city's Museum Quarter. Here you will find a varied offering of excellent museums in a setting of picturesque courtyards, unexpected small restaurants and delightful little shops.

Along the canals there is a rare phenomenon, of which Utrecht citizens are extremely proud: the wharves. These wharves, which provide direct access to cellars, were used for loading and unloading ships and for storing goods in the Middle Ages. These days, they are mainly used as outdoor terraces for restaurants and bars. Sitting by the water, you can enjoy a drink or meal looking over the decorative lit canal.

Utrecht Summer School

The Utrecht Summer School started in 1986 with one course: Dutch Culture and Society. From that point onwards, in 35 years the Utrecht Summer School has developed a broad selection of over 200 courses in virtually all disciplines offered at Utrecht University, HU University of Applied Sciences and HKU University of the Arts. In the past years, Utrecht Summer School has attracted more than 4,000 students annually from 125 different countries, which makes it the largest academic summer school in Europe. The Summer School programme is characterised by strong, academic courses in a variety of subjects. For most of the courses ECTS credits are awarded. In Covid-year 2020 a total of 60 online courses were taught, attracting over 1,300 students.

Utrecht Summer School aims to provide its participants with an unforgettable stay in Utrecht and the Netherlands. In addition to the study programme, there is a social programme including excursions, sports and social gatherings.

Higher education in the Netherlands

The education system in the Netherlands is known for its high quality in education and research, its international study environment and for having 2,100 international study programmes and courses. The Netherlands has two main types of higher education. One, the research universities, which focus on the independent practice of research-oriented work in an academic or professional setting. Two, the universities of applied sciences, which are more practice-oriented, preparing students for specific careers.

Utrecht University (UU)

With approximately 30,000 students and over 6,500 members of staff, Utrecht University is the largest and most renowned university in the Netherlands. Utrecht University is a research university comprising seven faculties, which collectively span the entire academic spectrum in teaching and research. Founded in 1636, the University is now a modern, leading institute enjoying a growing international reputation. In the prestigious Shanghai Academic Rankings of World Universities 2020, Utrecht University ranks 1st in the Netherlands, 15th in Europe and 52nd worldwide.

Utrecht University offers a broad range of 49 undergraduate and 146 graduate programmes, the latter including many English-taught programmes. Every year, more than 2,000 international degree-seeking students and international researchers stay in Utrecht for variable periods of time. Utrecht University is linked to the names of many prominent academics among whom are Buys Ballot, Donders, Rudolf Magnus, Van Unnik and Freudenthal. The list also includes twelve Nobel Prize Winners.

More information: www.uu.nl/EN

HU University of Applied Sciences (HU)

HU University of Applied Sciences Utrecht (HU) has a rich history. It is a vibrant and innovative knowledge organisation, situated at the heart of the Netherlands in a cosy, medieval city. Every day, thousands of students and staff members work together, and with members from professional practice. HU is the third largest university of applied sciences in the Netherlands, with 35,000 students (including 1,500 international students), representing more than hundred nationalities. HU offers a wide range of programmes in the fields of Communication & Media, Business & Management, Education & Pedagogy, Health Care & Welfare and Engineering & Technology; full-time and part-time, undergraduate and master programmes, and short courses, as in Utrecht Summer School. As a university of applied sciences, we are doing everything we can to make life-long development possible.

At HU, education, research and professional practice meet. All programmes are geared towards the practical aspects of the various disciplines and learning is competence based with the emphasis on professional skills and work placements. Sustainability is at the core of our education, and research programmes, and in our facilities, buildings and daily operations. More information: www.internationalhu.com

HKU University of the Arts Utrecht (HKU)

HKU University of the Arts Utrecht is the largest educational institution for arts, culture and media in the Netherlands, and is one of the largest in Europe. Located in Utrecht, HKU has approximately 4000 students taking part in ten bachelor programmes and five master programmes of which several in English at the schools of Fine Art and Utrechts Conservatorium, besides a broad spectrum of foundation courses.

HKU offers challenging and innovative education and research trajectories in design, media, games and interaction, music and technology, fine art, arts management, theatre and music. HKU is renowned for producing many digital and interactive media pioneers and its applied research in the areas of creativity, digital design, entrepreneurship and social innovation has had a strong impact in the cultural and creative industries and beyond.

Summer School Courses and 'special tracks'

Whether you are a bachelor or a master student, a PhD candidate or a professional: the Summer School offers a course on your level. In this brochure, the level is indicated for each course. The length of the courses varies from one week up to six weeks. You can make your own combination of courses that meet your personal requirements. For every discipline we suggest some 'special tracks'; course combinations that have proved to be successful during earlier Summer School editions.

International combinations

Thanks to our international partners, you can even plan a truly international experience by combining a summer course in Utrecht with a course elsewhere in Europe. Dive into the thrilling history of Europe with 'The Making of Europe'. This track takes place in three of the most exciting cities of Europe: Rome, Utrecht and Berlin. Or give your summer an international touch by combining 'European Politics' in Utrecht with a course on 'European integration' in Tartu, Estonia. You can also expand your knowledge on European art by following the special track 'History of Art: European Highlights', which takes place in Florence, Utrecht and Berlin, Utrecht Summer School even takes care of the transfer between the different locations! In this brochure we present various international programmes. If a course (partially) takes place abroad, the course location is clearly mentioned on the course page. Please see our website for more information about international combinations.

Online courses

Regardless of the Covid-19 pandemic, in the previous Summer School edition we were still able to offer over 60 courses in an online format. This year, a number of course directors have decided to go online (again), as this has turned out to be a successful format! In this brochure, the courses which will be offered online are illustrated with a computer icon on the right side. Although not presented as such, there are also numerous courses that will initially be offered on location, but with a safety plan in case we will not be able to welcome you to our campus in Utrecht. In order to learn if this is the case for the course you are interested in, please check the course description on our website for the most up to date information.

Accommodation

Utrecht Summer School offers housing for its students. Usually students are accommodated in student residences, or in rare cases, in hotels. The student residences are located throughout the city.

All accommodation is situated within easily accessible distances from the various educational institutions. Some are located at the University campus 'Utrecht Science Park', and some in the city centre of Utrecht or its suburbs.

All rooms in the student housing are fully furnished. Depending on the accommodation, apartments include full-fitted kitchens. The rooms are single rooms (or in rare cases double rooms) with shared facilities of kitchen, toilet and bathroom. In the kitchen students can find everything they need to cook a nice meal. The Utrecht Summer School generally tries to house students enrolled for one course in the same accommodation. However, students enrolled in different courses might also be housed together in the same building. This gives you the great opportunity to meet international students from other disciplines.

Booking a private hotel room

Staying in a private hotel room is also a possibility. If you want to be sure that you will be staying in a private (hotel) room, or if you want to bring a friend or spouse with you to share your room with, we recommend you to book a hotel room in Utrecht. We have selected a few hotels for you. These are situated in the city centre and it is possible to book a single or a double room at special rates for participants of the Utrecht Summer School. More information can be found on our website.

Accommodation abroad

Utrecht Summer School offers a wide range of summer courses abroad. We work with universities in Estonia, Germany, Italy, Latvia, among others. Our university partners provide accommodation facilities for students. For up-to-date information about the accommodation facilities, please visit our website.

Accommodation discount

If you combine two successive courses and make use of the accommodation offered by the Utrecht Summer School, you will receive a €50 discount on the housing fee of €200. For every extra course you take, you will receive an additional discount of €50. This discount will be automatically processed in your account.

Social programme

Utrecht Summer School does not only offer you a fine selection of interesting courses in all kinds of disciplines, it also intends to give the participants an unforgettable stay. Therefore, we invite all students during the months of July and August to check our attractive social programme, which includes excursions, sports and social gatherings. To give you an impression, in recent years, the social programme included excursions throughout

the Netherlands night canoeing through the canals of downtown Utrecht, a pub quiz, and (guided) trips to famous museums. Just as last year, we will also offer online social activities for people participating in online courses. These and other activities will provide the perfect setting for you to meet international students from other summer school courses and to get to know your class mates better! A full overview of all activities will be available online. When the 2021 programme is available you can book your tickets online to ensure you can join!

Sports card

The University sports centre, Olympos, offers a special membership card. For only € 17,50 (duration of one month), participants of the Utrecht Summer School can make unlimited use of its sport and fitness facilities. Sports centre Olympos boasts top-class facilities: there are four squash courts and a well-equipped fitness centre. Outdoor facilities include nine all-weather tennis courts. The Olympos Sports Bar (Sportcafé Olympos) offers a varied menu of food and beverages at very reasonable prices. Visit one of the parties or watch an exciting sports event on their big-screen TV.

Application procedure

You can apply for our courses through our website (www. utrechtsummerschool.nl). For all of our courses, payment can be done online from a credit card, via IDEAL or via a bank transfer. Since the courses have various target groups, entry requirements may vary.

We are looking forward to welcoming you or your students in Utrecht this summer!

Culture

The Utrecht Summer School offers a large number of academic courses on cultural topics. Together with our international partners we give you the opportunity to discuss central issues in European integration, cultural diversity within the European continent or European history and its politics. With the ancient city of Utrecht as starting point, you can study the development of Dutch identity, present-day Dutch society and the role of the Netherlands on the international stage. Other exciting subjects that can be examined this summer include Religion, Intercultural Communication, Battlefield Excavation or the Posthuman.

Faculty of Humanities (UU), in cooperation with **Tartu International Summer University and University of Latvia**

SPECIAL TRACK

.

The Baltics in the European Union

The Baltic States share an intricate history of repression and liberation and are now thriving culturally and economically. Learn about the history and identity of these countries and their connection to the European Union over the course of six inspiring and educational weeks. From lectures to company visits, from museums to the European parliament, you will have a diverse and unforgettable experience in these three distinct yet interconnected countries.

COURSE DIRECTOR	Timo Houtekamer, MA, Prof. dr. Andres Kasekamp & Dr. Inese Runce
LEVEL	Bachelor
PERIOD	5 July - 13 August 2021
CREDITS	12 ECTS
COURSE FEE	€ 1950
HOUSING FEE	€ 1010

European Politics and Economy

Faculty of Humanities (UU)

The European Union (EU) is a political and economic union of 27 democratic European member states. With almost 500 million citizens, it has become a major player in global politics. In this course, the European Union is the main object of study. You will be introduced to the Union's history, institutional structures, current aims and future challenges. Lectures will explain the historical background and the various stages of integration. Other themes that will be examined include the role of European leaders, the future political expansion of the EU, transatlantic relations and the development of a shared foreign policy and development aid.

.

COURSE DIRECTOR	Dr. Jonne Harmsma
LEVEL	Bachelor
PERIOD	5 July - 16 July 2021
CREDITS	4 ECTS
COURSE FEE	€ 650

European Cultures and Identities

Faculty of Humanities (UU)

Have you ever wondered what makes Europeans 'European'? During this course you will uncover the answers while staying in the beautiful medieval city of Utrecht. You will uncover Europe's cultural pluralism and examine its varied identities that still exist today; even though the majority of European countries is progressively collaborating on an economic and political level. Each of Europe's countries and peoples still carry their own distinctive cultures, languages, political views, religions, and traditions. Overall, this course offers an introduction to Europe, a continent of great diversity.

Discovering the Dutch

Faculty of Humanities (UU)

SPECIAL TRACK

.

Culture

Dutch Culture and Society

This special track explores the question of Dutch identity by placing the history of the Netherlands and Dutch art in a wider European and transatlantic perspective. You will be introduced to the rich cultural traditions that the Netherlands developed from the Dutch Golden Age to the present day in such artistic fields as painting, literature, poetry and filmmaking. You will also analyse internationally debated issues in Dutch society in the past and present. These include traditions of literacy, cosmopolitanism, and tolerance as well as more practical issues including euthanasia and the internationally well-known drugs policy.

COURSE DIRECTOR LEVEL PERIOD CREDITS COURSE FEE HOUSING FEE	Eveline Deneer & Maarten Bachelor 19 July - 13 August 2021 8 ECTS € 1320 € 650	Manse

Dutch Culture: Society and Current Issues

Faculty of Humanities (UU)

In this course you will explore Dutch culture and identity by focusing on present-day Dutch society and its recent history. You will learn about typically Dutch phenomena such as the poldermodel, mobile flood barriers and windmills as well as their contributions to the economic success and the international orientation of the Netherlands. You will also have lectures on subjects such as religious diversity, (im)migration and secularization. One of the excursions will be to the city of The Hague where we will visit the Binnenhof; the square that forms the very heart of Dutch government.

📕 online course

Dutch Culture: History and Art

Faculty of Humanities (UU)

During this course you will be introduced to the rich cultural traditions developed in the Netherlands from the 17th Century to the present day in artistic fields such as painting, literature, poetry and film-making. The question of Dutch identity will be explored by placing the history of the Netherlands and Dutch art in a wider European Perspective. This will then lead to exploring traditions of literacy, cosmopolitanism, tolerance, its connections to the wider world, and the challenges that were encountered during periods of war and upheaval.

Exploring Culture through Data: Digital methods & Data practices

Faculty of Humanities (UU)

The accelerating datafication of society constitutes challenges and opportunities for humanities research. Participants of this course get acquainted with some of the (methodological) fundamentals of data practices in the Digital humanities. These will include data collection, data preparation, data visualisation, critical data and algorithm studies, network analysis, and an introduction to programming in Python. After training these skills for three days, the participants work in small teams on a hands-on case.

The Posthuman & New Materialism

Faculty of Humanities (UU)

The course will continue the tradition of neomaterialist, critical feminist posthuman theory that Braidotti is known for. It focusses on the intersections and divergences between two movements of thought that are close, but distinct. The course offers an overview of this scholarship across a trans-disciplinary range of fields that includes philosophy, literature, law, media, pedagogy and the arts. Mindful of the patterns of exclusion of the sexualised, racialised and naturalised "others" that were not recognised as belonging to humanity, special attention is devoted to perspectives emerging from Black and indigenous epistemologies.

The Art of the Renaissance in **Florence and Rome**

Faculty of Humanities (UU)

Florence, originally founded by the Romans, was governed by the Medici family for centuries. Most of them had a passionate interest in painting, sculpture, architecture and literature. Even today, Florence keeps an exceptional artistic heritage which provides marvellous evidence of its aged culture. This course offers students the opportunity to study the works of art from the Renaissance period, while staying in Florence.

Rehabilitation in Physiotheraphy and Allied Health Care.

Healthcare (HU)

An Introduction in Pain Management, Mental Health and Hand Rehabilitation in the Netherlands

This online introduction course is intended for students and recent graduates in physiotherapy and related fields interested in pain management, mental health and rehabilitation of hand injuries. The participant will be introduced to state-of-the-art knowledge and clinical reasoning skills. Lectures and seminars on these specialized fields alternate and we will use various interactive methods to encourage clinical reasoning.

Interprofessional Collaboration in Stroke Management

Healthcare (HU)

In this summer course you will work in interprofessional groups (e.g. medicine, nursing, occupational therapy, psychology, physiotherapy, speech-language therapy, social work). You will start from your own profession and knowledge of diagnosis and treatment of the problems of patients after a stroke. Afterwards, you will learn how to prepare and participate in interprofessional discussions and rounds. During the course you will enlarge your knowledge about stroke and other professions. For this we use the ICF-system (International classification of functioning, disability and health).

Depression Management and Suicide Prevention

Healthcare (HU)

Our aim is to provide you with the latest evidence, knowledge and skills in the area of depression management and suicide prevention. Both are highly prevalent worldwide but they can be prevented and treated with a multidisciplinary approach. In this summer school course we will address the holistic and evidence based modalities to prevent adverse incidents, foster harm reduction and increase the quality of life of patients and family having problems with mood disorders and/or self-destructive behaviour.

SPECIAL TRACKS

A special track consists of several courses, which have been successfully combined in the past. Enrolling in a special track is more convenient than registering for each course separately, and it often results in a substantial discount.

Law and Economics: Corporate Governance and Mergers and Acquisitions (2 weeks)

- Corporate Governance and the Financial Crisis and Covid-19 Crises
- Understanding and Managing Mergers and Acquisitions

Highlights of Law and Economics (2 weeks)

- European Competition Law and Economics: Cartels and other Evils
- Financial Law and Economics: The (Next) Financial Crisis and Europe

Introduction to Public International Law and the Law of the Sea (2 weeks)

- Introduction to Public International Law
- Introduction to the International Law of the Sea

Will Law

International Human Rights Law: An Introduction

Faculty of Law, Economics and Governance (UU)

Interested in learning about human rights? This one-week online introduction course focuses on the major features of international human rights law. It begins by examining the philosophical and political bases of human rights and then explores human rights documents and mechanisms for the promotion and protection of human rights at the international and regional levels. Particular attention will be paid to issues of equality and discrimination, including on grounds of sex and race. Through lectures, interactive working groups and expert panels, participants will gain an understanding of the various elements - and their interplay - involved in this field.

COURSE DIRECTOR LEVEL PERIOD	Advanced Bachelor 5 July - 9 July 2021

Highlights of Law and Economics

Faculty of Law, Economics and Governance (UU)

SPECIAL TRACK

This track deals with the highlights of Law & Economics and Europe. In the first part, the effects of European Competition Law on the economy are discussed. In the second part of this track the effects of Financial Law on the (European) Economy and the Eurocrisis are discussed. In both weeks students are asked to formulate sustainable solutions for current issues in the domain of European Law and Economics.

COURSE DIRECTOR Prof. dr. Wilco J. Oostwouder LEVEL Advanced Bachelor PERIOD 5 July - 16 July 2021 CREDITS 3 ECTS COURSE FEE € 1050 HOUSING FEE € 350

📕 online course

European Competition Law and Economics: Cartels and Other Evils

Faculty of Law, Economics and Governance (UU)

This course deals with the effects of European Competition Law on the behaviour of businesses in the European Union (EU). An effective common market within the EU requires a fair and undistorted competition. Hence the European Commission (EC) vigorously attacks cartels and abuses of power by monopolists. A recent example of a Cartel is the 'cooperation' between seven international banks – Barclays, RBS, Citigroup, JPMorgan, and MUFG by participating in a foreign exchange spot trading cartel. In this case the European Commission imposed a total fine of € 1.07 billion in 2019.

Financial Law and Economics: The (Next) Financial Crisis and Europe

Faculty of Law, Economics and Governance (UU)

The financial crisis of 2008 shook up the world and was coined as the worst financial crisis since the 1930s Great Depression. Only a year later, the European Sovereign Debt Crisis destabilized the financial market as it came out that the debts of some countries, like Greece, exceeded their GDP. Are these crises really over? Or is the next crisis just only one step away? By way of lectures, participation in workshops and writing a paper, participants get insights in these issues while formulating solutions for a more sustainable financial system.

Current challenges in EU Law

Faculty of Law, Economics and Governance (UU)

This course will challenge you to understand and to critically assess the role of EU law in responding to the major challenges the EU is currently facing. It will involve discussing issues ranging from the economic recovery after the COVID-19 pandemic to the difficulties in enforcing the rule of law in the Member States and the EU's response to climate change. A special focus will be dedicated to the Digitalization of society and to issues of European Criminal Justice. Participants will be exposed to different teaching methods, including a negotiation exercise.

COURSE DIRECTOR Prof. mr. dr. Ton van den Brink Advanced Bachelor 12 July - 16 July 2021

Financial Law and New Technologies

Faculty of Law, Economics and Governance (UU)

New technologies are constantly testing wellestablished principles of financial law. Investors and other users of financial services can take advantage of new FinTech opportunities to have better services at cheaper costs, but policymakers are struggling to strike a good balance between the need to foster innovation and the necessity to protect weak market participants. How can financial law cope with technological developments on blockchain, new payment services, crypto-assets, crowdfunding, high frequency trading, and robo-advice?

.

Law & Econom

Corporate Governance after the Financial and Covid-19 Crises

Faculty of Law, Economics and Governance (UU)

Failing corporate governance of financial institutions has often been mentioned as an important cause of the crisis. Consequently, having a deeper understanding how corporate boards are formed and how they act have become a topic of increasing importance. It also is already clear that the Covid-19 crisis will have a material effect on corporate governance. Do you want to know how corporations are directed and how we can make them perform better? This course will provide you with the answers!

Understanding and Managing Mergers and Acquisitions

Faculty of Law, Economics and Governance (UU)

Many executives say they use M&A (Mergers & Acquisitions) as a means to consolidate or expand the market position or increase its production efficiency. Most mergers and acquisitions, however, fail to create value, leading to the so-called 'merger paradox'. By adopting a multidisciplinary and institutional perspective, this course aims to increase the understanding of merger determinants and effects. This course deals with the economic, legal and financial aspects of Mergers & Acquisitions (M&A).

Introduction to the International Law of the Sea

Faculty of Law, Economics and Governance (UU)

The current regime for the oceans is built on the United Nations Convention on the Law of the Sea of 1982 (LOSC). This framework convention divides the oceans in coastal state maritime zones and international areas. In all these areas the legal regime seeks to maintain a balance between the rights, interests and obligations of individual states and the international community's interests. In this course, an introduction is provided to the law that regulates the oceans.

COURSE DIRECTORProf. dr. Alex Oude ElferinkLEVELBachelorPERIOD12 July - 16 July 2021CREDITS1.5 ECTSCOURSE FEE€ 350

Law and Sustainability

Faculty of Law, Economics and Governance (UU)

Students will learn how issues of sustainability are dealt with in the legal order at the international, national and at the European Union level. The summer school will address how the law can buttress sustainability but also how it can create obstacles to the realisation of sustainability objectives. This complex relationship is the subject of the Summer School on Law and Sustainability.

Smart Sustainable Cities

Building and Environment (HU)

What does the city of the future look like? Since the beginning of the 21st Century the majority of the world population lives in an urban area. The Summer School Smart Sustainable Cities discusses how to boost the sustainable development of cities. In one week, we will dive into several highly relevant themes such as clean air, mobility, waste, energy, and also innovation, inclusiveness, participation and smart solutions to these issues.

Hands-on Process Mining

Information and Communication Technology (HU)

Process mining is a data analytics technique to discover, evaluate or enhance business processes by analysing the data traces left behind during the execution of these processes. It provides insights based on the data captured in the process-supporting IT systems. In contrast to other data analytic mechanisms, process mining analyses process flow, i.e. the sequence of steps taken by various actors to execute a particular task. The insights gained by process mining can be used for conformance checking or process improvement.

.

Process Mining Research

Faculty of Science (UU)

Process mining is a rapidly growing field of research. This is testified by an established research community, numerous publications and thousands of organisations applying process mining. Because of this interest, we now face a vast body of knowledge that spans multiple disciplines and covers a range of methods, tools, and techniques. A single individual may find it daunting to set up a new research line in this field. After all, it is difficult to oversee all relevant developments and to understand the different approaches available. To help and guide aspiring process mining researchers, this course aims at bringing them together.

Introduction to Artificial Intelligence

Information and Communication Technology (HU)

Machine Learning and Neural Networks

Artificial Intelligence (AI) has grown in the last few years from a promising research field into a widely applied technology. Many processes and decisions in our lives are governed by algorithms: from autonomous driving, e-commerce recommendations, traffic predictions to fraud detection. It is important that AI is used correctly, to prevent privacy issues, discriminations and other harm. In this course we explain what AI is, how algorithms work, and how you select, train and implement algorithms.

Applying Ethics in Digital Innovation

Information and Communication Technology (HU)

Technology is not neutral. In this course we discuss and practice how to recognise and address moral questions in digital innovation. How do you respect personal and public values such as security, autonomy, well-being or distributive justice in technological designs? And how do your own values and norms influence the choices you make or would like to make? We introduce various ethical tools and techniques and show how their application leads to more value-sensitive choices. This will be very much a hands-on course.

Business Process Management and IT

Economics and Management (HU)

This course will provide both a theoretical background and hands-on experience with business process management (BPM), improvement and innovation. On the one hand it is important for organisations to have grip on their processes, and to continually evaluate and improve their processes in an evolutionary way; Information Technology (IT) can play a supporting role in this. On the other hand, innovative IT can play a disruptive role for businesses. In this course both aspects will be illustrated and discussed.

Introduction to GIS for Human and Behavioral Scientists

Faculty of Geosciences (UU)

The objective of the course is to provide students that have a background in social, human or behavioral sciences, with an introduction to GIS (Geographic Information Systems). This course aims at highlighting the specific qualities of GIS regarding visualisation and combination of datasets with a spatial component. Several topics will be covered, such as introduction to ArcGIS 10.4 and a presentation of data and results.

COURSE DIRECTOR	Dr. Tom de Jong

Sense making of GPS Data in a GIS environment

Faculty of Geosciences (UU)

This course focuses on analysis of outdoor movements in space and transport network-based distances. The objective is to provide students with insight in the principles of sense making of GPS Data in a GIS environment. Collection of travel/movement data is nowadays made easy through the use of GPS-loggers and Smartphones. This course aims to collect, clean and enrich these datasets with GIS by combining locational data with existing land use and transport datasets.

Futuring for Sustainability

Faculty of Geosciences (UU)

What we do in the present is profoundly influenced by our expectations of our futures. The annual 'Futuring for Sustainability Summer School' is an interactive course. During this one week course we teach students to understand how techniques of futuring contribute to realizing societal transformations towards sustainability: living well equitably within ecological means. But what does a sustainable world look like? In what type of sustainable future would you want to live? How can we prepare and collaboratively create a sustainable world? In the Futuring for Sustainability summer school, these are central questions.

Learning to Unlearn Decolonially

University College Utrecht (UU)

Coloniality of knowledge, aesthetics and spirituality are areas of experience managed and controlled by major Western institutions. The combination of institutions and languages secured the belief in the universality of Western knowledge, aesthetics, beliefs and its peculiar 'rational' world-view. It also drove the appropriation and destitution of non-western knowledges, aesthesis and spiritualities. The seminar will be devoted to explore decoloniality as a praxis of reconstitution, of re-existence and the re-encounter with the communal. Learning to unlearn is a step towards disobedient delinking and the beginning of a walk towards remaking and re-learning ourselves in communal and decolonial paths of re-existence.

Global Transformations

Utrecht Centre for Global Challenges (UU)

How can systemic drivers of global challenges be identified? What are transformations and how do they come about? How can different forms of experimentation and adaptive learning be used to achieve transformation? This one-week module focuses on the development of competencies for contemporary global leaders working to tackle global challenges. It is designed for programme coordinators, project leaders, strategists, and other individuals seeking to facilitate transformative solutions in their work. It uses both interdisciplinary theories and insights from practice to equip participants with the skills to critically understand complex global challenges and confront them in practice.

Global Trends in Demographics and Migration

University College Roosevelt

Global trends in Demographics and Migration is a two-week online summer course that examines developments in global and regional changes in the population composition (declining birth rates and ageing) and migration policies today from interdisciplinary perspectives. The course aims at familiarizing students with a contemporary phenomenon that can be seen as one of the most outspoken expressions of globalization.

Advanced Communication Skills: Between Persuasion and Empathy

Faculty of Humanities (UU)

Effective communication is key for high performing professionals. If you want to bring your communication skills to the next level and work on your personal development, then this course is here for you! Two experienced professionals teach you the most valuable skills they learned themselves over the past 15 years. This course takes you beyond the 'basics'. You will amongst others learn the highlights from principlebased negotiation, empathic communication, critical analysis, influencing group dynamics and inspirational speaking.

Psychodiagnostics: Theory and Skills Training

Faculty of Social and Behavioural Sciences (UU)

This summer, Utrecht University offers you an online 'bridging' course in psychodiagnostics, in order to overcome deficiencies in psychodiagnostics and assessment for entering the master course Clinical Psychology. This summer course focusses on familiarizing oneself with theoretical backgrounds of psychodiagnostics, practicing skills necessary to master all stages of the diagnostic process (intake, formulating a diagnostic question, formulating hypotheses, selecting, scoring and interpreting methods and tools and finally reporting conclusions and recommendation).

.

COURSE DIRECTOR	Drs. Lisalotte Verspui
LEVEL	Advanced Bachelor
PERIOD	5 July - 16 July 2021
CREDITS	4 ECTS
COURSE FEE	€ 700

Developmental Psychopathology and Psychological Assessment

Faculty of Social and Behavioural Sciences (UU)

Focussing on Childhood and Adolesce

This course provides students with theoretical knowledge on developmental psychopathology. Students acquire knowledge on most common problems in youth, age specific characteristics of psychopathology and developmental transactional explanatory models for youth psychopathology. Students will also acquire theoretical and applied knowledge on psychological assessment and diagnostic decision-making process. Students will get acquainted with some assessment instruments that can be used to test some 'typical' hypothesis in the Child and Youth clinical practice.

Introduction to Structural Equation Modeling using Mplus

Faculty of Social and Behavioural Sciences (UU)

We offer a 5-day course on how to perform basic SEM analyses using Mplus. The main objective of this course is to learn how to analyse several models with Mplus (e.g. path models, multiple group models, mediation and moderation, confirmatory factor analysis, and longitudinal models). No previous knowledge of Mplus is assumed, but prior knowledge of SEM, although not mandatory, will make this course more useful.

📕 online course

Advanced Course on using Mplus

Faculty of Social and Behavioural Sciences (UU)

This is a five-day course on structural equation modeling (SEM) using Mplus. If you already know how to analyse your data in Mplus but want to learn more about what you are actually doing, and especially if you want to know more about advanced longitudinal analyses, this course is for you. The course consists of in-depth lectures on the fundamentals of Mplus and advanced longitudinal models.

COURSE DIRECTOR	Dr. Rebecca Kuiper Advanced Master
PERIOD	12 July - 16 July 2021
CREDITS	1.5 ECTS
COURSE FEE	€ 620
HOUSING FEE	€ 200

Introduction to Multilevel Analysis

Faculty of Social and Behavioural Sciences (UU)

This course will teach you the theoretical basics of multilevel modelling and some important methodological and statistical issues. You will also learn how to analyse multilevel data sets with the HLM and Mplus programs, to interpret the output and to report the results. The benefits of multilevel analysis are discussed both in theory as with empirical examples. This course restricts to a quantitative (i.e. continuous) outcome variable. Categorical outcomes are part of the course Advanced Multilevel.

Data Science: Introduction to Text Mining with R

Faculty of Social and Behavioural Sciences (UU)

Applications of text mining are everywhere: social media, web search, advertising, emails, customer service, healthcare, marketing, etc. In this course, students will learn how to apply text mining methods on text data and analyse them in a pipeline with statistical learning algorithms. The course has a strongly practical hands-on focus, and students will gain experience in using and interpreting text mining on data examples from Humanities, Social Sciences and Healthcare.

Data Science: Statistical Programming with R

Faculty of Social and Behavioural Sciences (UU)

R is rapidly becoming the standard platform for data analysis. This course offers an elaborate introduction into statistical programming in R. Students learn to operate R, form pipelines for data analysis, make high quality graphics, fit, assess and interpret a variety of statistical models and do advanced statistical programming. The statistical theory in this course covers t-testing, regression models for linear, dichotomous, ordinal and multivariate data, statistical inference, statistical learning, bootstrapping and Monte Carlo simulation techniques.

A Gentle Introduction to **Bayesian Statistics**

Faculty of Social and Behavioural Sciences (UU)

This course describes the stages involved in Bayesian analysis: specifying the prior and data models, deriving inference, model checking and refinement. We discuss prior and posterior predictive checking, and selecting a technique for sampling from a probability distribution. Other topics discussed are: approximate measurement invariance (a Bayesian method to assess comparability of data), evaluating hypotheses via the Bayes Factor and information criteria, and combining evidence from multiple studies addressing the same research question. Finally, we propose strategies for reproducibility and reporting standards.

Survey Research: Design, **Implementation and Data** Processing

Faculty of Social and Behavioural Sciences (UU)

Changes in technology and society strongly influence modern survey research. This course covers the essentials of modern survey methodology, organised by the Department of Methodology and Statistics in collaboration with Statistics Netherlands (CBS). Central to the course is survey quality and the reduction of Total Survey Error (coverage, sampling, nonresponse, including questionnaire and mode effects), while balancing logistics and survey costs. Best practice guidelines for surveys from design to implementation, analysis and reporting will be discussed.

Bilingualism

Faculty of Humanities (UU)

Ask someone their opinion on bilingualism and you are likely to hear statements such as: 'learning two languages from birth confuses children and impairs their cognitive development', 'Bilingual children can't speak either of their two languages properly' or 'You can only become bilingual if you start acquiring your second language as a young child.' Though common currency among the general public, each of these statements is in fact a myth. In this course, you will discover why this is the case as we review some of the most important findings from the research on bilingual children.

Introduction to Phonetics and Phonology

Faculty of Humanities (UU)

.

In this course we will investigate sound in language from 5 different perspectives: alphabet (units), acoustics, articulation, prosody and learning. These complementary perspectives together show how language uses a relatively narrow range of sounds (although this range is broader than you might think!) but does so in a very intricate way. In addition, languages' sound systems are intimately linked to other aspects of the linguistic system: meaning, sentence structure, the lexicon, and word structure, which are also studied within the Research Master's in Linguistics programme. We will explore these intricacies and connections from the standpoint of (formal) linguistics.

SPECIAL TRACKS

A special track consists of several courses, which have been successfully combined in the past. Registering for a special track is more convenient than enrolling for each course separately, and it often results in a substantial discount.

Doing Business in Europe (5 weeks)

- European Politics and Economy
- Europe as a Business Network, Ecosystem and Industry (Utrecht Milan)

Doing Business in Europe (extended) (6 weeks)

- European Politics and Economy
- Europe as a Business Network, Ecosystem and Industry (Utrecht Milan)
- Global Management: Strategic Marketing, Management
 and Finance

Innovation in European Business (6 weeks)

- Innovation and Entrepreneurship in Europe: Business Models and Financing Models
- Innovation Lab: Design Thinking for Socially-Relevant Innovation
- Leadership for Innovation and Performance Happiness

Doing Business in Europe (extended)

Faculty of Humanities (UU) and Business & Management (HU)

SPECIAL TRACK

This track offers three different yet complementing approaches to the world of business from a European perspective. First, you will be introduced to the European Union and its historical, social and economic developments. Next, we will widen our view and look at the European Union as a business network. A visit to Milan, fashion capital of Europe, is included. Lastly, you will obtain hands-on practice in running a company; using your knowledge of the past weeks.

New Financing Models for a Changing World

Business & Management (HU)

Since the credit crisis in 2008, banks have been focused. The standards for providing loans have been raised to such an extent that Small and Medium Sized companies (SMEs) can hardly fund new investments. Start-ups are having difficulties in raising funds. This trend will continue and therefore SMEs are increasingly sourcing their funds in alternative ways. Other financial institutions too are introducing new and innovative models. In short, the financial world is changing, and new models of financing are becoming more popular. The Covid-19 crisis has made this transition even more necessary.

Project Management: From Theory to Practice

Business & Management (HU)

Today's environment requires organisations to continuously change policies, processes or practices - changes often organised as projects: unique, temporary efforts, performed by multi-disciplinary teams. Projects need dynamic project managers that structure complex tasks, keep an overview and have great social skills. This course prepares you for all this by combining theoretical background with a practical approach to project management. You will learn about leading project management methods, work on project simulations in teams. Part of the assessment is the PRINCE2® Foundation Exam; you can earn the official certificate.

Agile Projects as Dynamic Capability

Business & Management (HU)

A central element in the dynamic capabilities of an organization is its ability to successfully transform existing assets and resources into new capabilities. Projects are key instruments to this rapid organisational change. However, the traditional 'plan & control' approach to project management does not fit the dynamic and flexible approach that successful organisational change requires. The solution to this problem can be found in 'Agile project management'. This course covers the Agile approach to projects from its conceptual foundations to the different methodologies and practical applications.

Applied Functional Programming in Haskell

Faculty of Science (UU)

Typed functional programming languages allow for the rapid development of robust programmes. This course explores some of the more advanced language features of Haskell, a state of the art functional programming language, together with some of its theoretical background. The course aims to teach not only the more advanced Haskell features, such as GADTs or type families, but also the underlying theory. Besides the lectures, there are numerous supervised lab sessions to help you come to grips with the material covered in class.

Mathematics Education

Faculty of Science (UU)

.

The focus of the 'Mathematics Education' course is: bringing participants up to date in curriculum development and research in the field of mathematics education, and refreshing and deepening the knowledge of meaningful and relevant mathematics education. Topics will include: curriculum development, revealing and building on talents of students, task design, classroom experiments and lesson study, contexts and tools for modelling and inquiry-based learning, assessment, and the use of technology for teaching and learning mathematics.

Multidisciplinary Game Research: Between Theory and Practice

Faculty of Humanities (UU)

This summer course provides a multidisciplinary perspective on games and play in contemporary culture, combining perspectives from various disciplines within the Humanities, Social Science and Computer Sciences. It addresses the challenges but also the transformative potential of both 'applied' and entertainment games, and provides participants with a holistic perspective including analysis, design and validation. By combining aspects of theory and practice, the course enables participants to better understand and meaningfully implement the potential of games and play within current socio-cultural contexts.

Data Science and Beyond

Faculty of Science (UU)

Data Assimilation with Elements of Machine Learning

How do meteorologists forecast the weather and climate? Is there a way to predict the profit from a wind farm? These are some of the questions modern science addresses by using data assimilation. A growing number of research institutes and companies develop and employ data assimilation and trained personnel. The school will describe the theoretical foundation of data assimilation together with numerical tutorials, all the way to state-of-the-art methods, including modern machine learning approaches and their combination with data assimilation.

Introduction to Complex Systems

Faculty of Science (UU)

Our world has an abundance of so-called complex systems. These are typically large collections of connected elements that influence each other. In this online course, we combine examples across Physics, Life Sciences, Socio-Economic Sciences and Humanities with an introduction to basic mathematical tools to learn a complex systems way of thinking. The main aim is to show students how complex systems science is applied by Utrecht University researchers to challenging societal problems.
