

Descripción

The raise of new risks for the protection of privacy results from the ongoing high rate of innovation. Experiences from developers, users and Data Protection Authorities have shown that privacy requirements need to be considered already at early stages of innovation concerning all kinds of eServices and should be integrated into the processes in each organisation. The new Project "PrivacyOS" aims at bringing together industry, SMEs, Government, Academia and Civil Society to foster development of privacy infrastructure for Europe, serving as a marketplace for those offering solutions to those facing new challenges.
