

PhD Students Coffee Time

JUEVES 03/02/2022

Sala de Reuniones SEMISOTANO

15:00

Maria Bisquert

Biogeografía y Ecología de Sistemas Acuáticos

She says:

A new and exotic Cyclocypridae ostracod expanding over Iberian wetlands

After the first detection of an unknown ostracod species in the Albufera lake, it has been found in different parts of the Iberian Peninsula. We carried out a bibliographic search to find the name of the species, but we could not find a match. The recently described genus *Dentocypria* is endemic to Thailand and is one of the eight genera of the family Cyclocypridae. After analyzing the characteristics of the genus and comparing them with those of the species found in the Albufera, it seemed to us that the species could belong to this genus. For the international mention on my PhD, I decided to travel to Thailand and work with Dr. Savatentalinton. She is a world expert in ostracods taxonomy and she described the genus *Dentocypria*. With her advise I worked on the classification and taxonomy of the new species.
