MINIMUM AND BASIC REQUIREMENTS**

You can choose several options to work with AERadio:

MANUAL

You can choose music, jingles and advertising from your library files. You can play anything you want to, by dragging with the mouse to digital playlists of AERadio. It is the usual way of working when you have your own contents production and announcers.

SEQUENTIAL

AERadio broadcasts or plays everything you choose for long periods of time (nights, lunchtimes, week-ends and others) Repeat and random modes are available. Endless broadcasts.

AUTOMATIC

With our schedule module and its planning view, you can schedule music, jingles and advertising you want to broadcast. Forget everything else. AERadio launches all your schedule for you at the dates and hours previously set by you. This module lets you create and send out all your music, jingles, advertising and others.

REMOTE

AERadio let you work by remote connection from another network computer, through intranet or even internet.

AERadio is the solution for

HOTELS
SHOPS
INTERNET STATIONS
RESTAURANTS

SHOPPING CENTERS
RADIO STATIONS
THEATERS
AUDITORIUMS

AERadio
Radio Automation Software
Automatización de Audio para PC

AERadio Professional

It is the complete version of AERadio. It let you work in Manual, Sequential, Automate or Remote option.

By means three digital playlists, AERadio carries out all broadcast tasks: music, audio files, advertising and jingles. It can easily play audio files from other windows by dragging them to the chosen playlist.

It is a perfect tool to administer file blocks, with available repeat and random options, in order to leave your company without staff in charge of your broadcasts for long periods of time.

The automate schedule module makes possible to schedule complete blocks that will be broadcasted at the dates and hours previously set by you. Thanks to this module, you could have your business closed, leaving automatic broadcast for several weeks or months.

It offers fading out, pre-listening, sound effects and the possibility to work simultaneously with several sound cards, in order to get different audio broadcasts with the same software.

Automatic jingle insertion, hour signals, linking up with any external sound source (satellites, tuners, players or internet URL's.

Remote connection
Network running
Internet broadcast: Shoutcast / through professional streaming is optional
Electric protection
Auto-scheduling assistant
Recording, edition, extraction and standardize tools included

AERadio Lite

It is the reduced version of AERadio Professional. It provides an only playlist + pre-listening, and you can choose to run manual or sequential option.

It does not include the automate schedule module for block handling, but using Sequential option you can insert jingles, hour signals, and link up to external sound sources automatically, also to Internet URL.

It includes Shoutcast module that lets you broadcast your contents to Internet.

AERecorder

AERecorder legal copy is an application that can record a broadcast to a physical hard drive. This hardware solves the legal requirements of Radio Stations and companies to preserve the contents during a certain period after the original broadcast.

Automatic recording 24 hours: The software records to a hard drive. You can select the sound quality you want to record, 24 hours a day. You can store broadcasts as long as you want to.

Recording of in-house programmes. You can choose dates and hours to record, selecting the preferred sound quality. (usually low, to avoid big sized files)

We offer high quality recording to subsequent repetitions. You can choose high quality recording only for specific hours, in order to repeat the contents in the future at a different time/day.

Guarantee, support, updates and copy protection for our range.
