**Identification:** 97.7% ID *Escherichia coli*

**Growth on selective/differential culture media**

- **ENDO AGAR**
  - Red colonies, red medium, golden sheen

- **TERGITOL AGAR**
  - Yellow colonies with yellow zone. Sometimes with rust coloured centre

- **VRBGA (Violet Red Bile Glucose Agar) AGAR**
  - Red-purple colonies surrounded by purple haloes

- **CTSM (Sorbitol MacConkey agar with Cefixime Tellurite) AGAR**
  - Transparent colonies with a pale yellowish-brown appearance and a diameter ~1 mm
