

EDITORS

James Aronson is head of the Restoration Ecology Group at the Center of Functional and Evolutionary Ecology, Montpellier, France, and curator of restoration ecology at the Missouri Botanical Garden, USA. He works on restoration and rehabilitation of degraded ecosystems around the world. He is editor of the book series “Science and Practice of Ecological Restoration,” published by the Society for Ecological Restoration International and Island Press. He has published more than seventy peer-reviewed journal papers and thirty book chapters and has co-edited or co-authored seven books on restoration and related activities. He is a co-founder and co-coordinator of the Restoring Natural Capital Alliance (www.rncalliance.org/).

João S. Pereira is a professor in the Faculty of Agronomy (Instituto Superior de Agronomia) of the Technical University of Lisbon, Portugal. He conducts research on the ecology and physiology of woody plants, with emphasis on drought effects, carbon balance, and ecosystem responses to global changes. He is a member of the editorial board of several scientific journals. He is also a member of the Portuguese National Council for the Environment and Sustainable Development and of the Academia Europaea, London (www.acadeuro.org/). He is author or co-author of more than one hundred articles in international refereed journals and multiauthor books and co-editor of four books.

Juli G. Pausas is a researcher at Consejo Superior de Investigaciones Científicas, the main public research institution in Spain. For the last twelve years he has been a researcher at the Mediterranean Centre for Environmental Studies, in Valencia, and a part-time assistant professor of ecology at the

University of Alicante. His research focuses on regeneration ecology and vegetation dynamics in Mediterranean and fire-prone ecosystems, specifically on the role of fire in shaping species, communities, and landscapes. He has experience in both field and modeling studies in the Mediterranean basin and Australia and has published more than eighty scientific papers.

CONTRIBUTORS

Mohamed Abourouh has been a researcher at the Forestry Research Center (CRF) of Rabat, Morocco since 1976. He has worked in R&D programs related to reforestation, silviculture, and forest health for the last thirty years. For more than ten years he was head of the Silviculture Group at the center, and since 2005 he has served as director of the CRF. He has published extensively on ectomycorrhizae and related topics (e.g., artificial regeneration and forest diseases) and has co-authored two books.

Maria Helena Almeida is an associate professor at the Technical University of Lisbon, Portugal. Her main research activities are the evaluation of genetic variability in trees and the development of modern tree seedling production methods. She earned the 1993 Soporcel Forest Research Prize for her PhD thesis, “Estudo da variabilidade geográfica da *Eucalyptus globulus* Labill.” Since 1995, she has been the Portuguese representative of the European Forest Genetic Resources Program. She is also author or co-author of several articles and chapters in international refereed journals and multi-author books.

Sahraoui Bensaid is a part-time lecturer in forest ecology at the University of Sciences and Technology, Alger, and a researcher at the Research Laboratory on Arid Zones. Since 1988 he has directed theses of seventy engineers in ecology on themes related to forest, steppe, and arid vegetation in Algeria. He has produced twenty publications and communications. In addition, he is a freelance expert for private consulting firms and international institutions.

Nora Berrahmouni is a forest ecologist and works as a head of the Forest Unit at the World Wide Fund for Nature (known also as the World Wildlife Fund)

[WWF]) Mediterranean Program. She coordinates forest conservation projects and teams in southern Europe and North Africa. Since 2004 she has led the development and implementation of the WWF cork oak landscape program. She has provided technical input for transnational training and many reports and publications prepared by WWF and partners.

J. Ignacio Jiménez Blanco is an associate professor in economic history at Complutense University of Madrid, Spain. His research focuses on contemporary agrarian history, and his current research focuses on the relationship between the transformation of the Mediterranean forests and the industrialization process. He has written several articles and book chapters, coordinated three national R&D projects, and directed two doctoral dissertations on Spanish forest history.

Hassan Boukcim has a PhD and fifteen years of experience in scientific research, including ten years at the French National Institute of Agronomic Research, at Montpellier. His research focuses on mycorrhizal symbiosis, root architecture, and ecophysiological adaptation of plants to harsh environmental conditions. He participated in many national and European R&D programs and is author and co-author of many scientific publications in international refereed journals. He is co-creator and leader of Valorhiz, an innovative company specializing in the fungal biotechnologies applied to environmental engineering (www.valorhiz.com).

Amélia Branco is a professor at the School of Economics and Management (ISEG) of the Technical University of Lisbon, Portugal. She has a PhD in economic history. She is a member of the Office of Economic and Social History, a research center at ISEG. Her main lines of investigation are forestry and its economic activities in the twentieth century. She has published several scientific papers and reports in that area.

Manuela Branco is an assistant professor at the Technical University of Lisbon, Portugal, where she conducts research on forest entomology and forest protection. Her main research interests are in the ecology of insect populations. She has published several scientific papers, collaborated on books, and participated in several national and European research projects in that area.

Miguel Bugalho is a researcher at the Technical University of Lisbon, Portugal. He holds an MS in ecology and a PhD in zoology from the University of Aberdeen and the Macaulay Institute, UK. His main research interests are

the foraging ecology of large herbivores and the effects of grazing on ecosystem ecology. He also collaborates with the Mediterranean Program of the World Wide Fund for Nature.

Maria Caldeira is a researcher at the Technical University of Lisbon, Portugal. Her research interests include tree regeneration, species effects on ecosystem functioning, biodiversity, and stable isotopes.

Pablo Campos is a research professor at the Institute for Public Goods and Policies of the Spanish National Research Council. He has carried out research in environmental accounting, agroforestry, and protected area economics. He has contributed to forty-nine research projects funded by national and European Union administrations and private enterprises. He is author of fifty-four articles in national and international journals, ninety-five book chapters, and five books. He received the National Award on Environmental Economics in 2002 from the Spanish government.

João M. B. Carreiras is a fellow researcher at the Tropical Research Institute, Lisbon, Portugal. His current research interests are the use of active and passive remote sensing data for mapping and quantifying land use and land cover change and biophysical parameters in tropical, subtropical, and temperate forests and woodlands in relation to anthropogenic land use and climate change.

M. Manuela Chaves is a professor at the Technical University of Lisbon and head of the Plant Molecular Ecophysiology Laboratory of the Institute of Chemical and Biological Technology, Oeiras, Portugal. Her research focuses on plant ecophysiology, especially crop plant response and adaptation to stressful environments. She was national coordinator of seven European Union-funded research projects, chair of the Portuguese Committee for the International Geosphere-Biosphere Program, and a member of the Advisory Committee for Global Change.

Ali Chebil has a PhD in agricultural economics from the Polytechnic University of Madrid, Spain. He was an associate researcher at the National Agronomic Research Institute of Tunisia from 2001 to 2003, and since 2003 he has been a researcher at the National Institute for Research in Rural Engineering, Water, and Forest. His research focuses primarily on natural resource economics and productivity analysis. He has published numerous journal articles in these fields.

Esteban Chirino is a researcher at the Forest Restoration Group of the Mediterranean Centre for Environmental Studies, Alicante, Spain. For the last ten years he has worked on various Spanish and European research projects related to the effects of land use and vegetation cover on water balance and aquifer recharge and improvement of seedling quality for restoration of semi-arid environments.

Inocência S. Coelho is a researcher in the Department of Agrarian Economy and Sociology Studies, Oeiras, Portugal. For the last fifteen years he has been conducting research on the economy, sociology, and history of Iberian agro-silvopastoral systems. Between 1999 and 2003 he was vice-president of the Portuguese Society of Rural Studies. He is author or co-author of more than forty articles on the socioeconomy and history of *montados*.

Alexandre Vaz Correia holds a degree in forestry and is interested in forest ecosystem modeling and silviculture. His main research focus is the impacts of climate change in forest ecosystems, and he has co-authored several chapters in books on climate change and silviculture.

Jordi Cortina is an associate professor at the University of Alicante, Spain. His research focuses on several aspects of ecosystem degradation and restoration in drylands, including the study of factors affecting the establishment of woody seedlings and the assessment and development of ecotechnological tools to restore degraded ecosystems. He has authored more than one hundred scientific papers, including thirty published in peer-reviewed journals.

Filipe Costa e Silva is PhD student at the Technical University of Lisbon, Portugal. His main interest is tree physiology, and he has conducted research on seedling quality, water relations, and plant hydraulic properties.

David Gomes Crespo is president of Fertiprado, private company dedicated to the selection, production, and sale of Mediterranean pasture and forage seeds. A former senior researcher of the National Institute of Agricultural Research and Food and Agriculture Organization staff member, he has also been a founding member and first president of the Portuguese Grassland Society, president of the European Grassland Federation, and chairman of the Continuing Committee of the International Grassland Congress. He is author or co-author of more than fifty articles in scientific publications.

Hamed Daly-Hassen is a researcher at the Institut National de Recherches en Génie Rural, Eaux et Forêts, Tunis, Tunisia, and he is a member of the

advisory group of the European Forest Institute Mediterranean Regional Office, Barcelona, Spain. He has worked in research programs related to forest economics, especially on forest valuation, forest evaluation, and marketing of forest products, for twenty years. He has published about fifty scientific papers in international and national refereed journals and numerous chapters in multi-author books.

Mario Díaz is a researcher at the Institute of Environmental Resources, Madrid, Spain. His main research area is the integrated analysis of distribution and abundance patterns of keystone and indicator species in Mediterranean forests, *dehesas*, and agricultural landscapes. He has published five books, thirty-three book chapters, and seventy-three papers in peer-reviewed journals and has participated in or directed more than twenty research projects.

Nguyen Q. Dinh received an engineering degree in geology from the University for Geology and Mining, Hanoi, Vietnam, in 1992 and an MS degree in physical land resources from the University of Ghent, Belgium. Since 2001 he has worked as a research fellow at the Department of Plant Ecology, University of Bayreuth, Germany. His research interests include remote sensing, scaling studies, and ecosystem modeling.

Mohammed Ellatifi is a forester and statistician interested in environment, natural resource economics, and the links between conservation science and development policy. He is forest director at Mosmart Morocco 2 Company and a professor of statistics and mathematics at Hassan II University in Casablanca. He is a member of the International Union of Forest Research Organizations board and chair and founder of the Sylva-World not-for-profit association. He authored two books and five manuals, co-authored the *Encyclopedia of Life Support Systems* (www.eolss.net) and one book, and published more than one hundred papers.

Ana Margarida Fonseca works in the applied management and development of the *montado* agro-silvopastoral system, in biological production form, in a large farm enterprise in Alentejo, Portugal. She has a degree in environmental sciences and a master's in human ecology. She has worked in research projects on the management of the *montados* and published a book on its history from the thirteenth to the eighteenth century.

Christelle Fontaine works at the Center of Evolutionary and Functional Ecology, Montpellier, France. She specializes in coordination, editing, and literature searches. Since 2003 she has worked with James Aronson on four

books and many articles. She also participated in two European-funded projects and authored two scientific papers on genetic diversity of the shea tree.

Ralf Geyer is a geologist with background in soil science, computer hardware, and simulation techniques. He is responsible for computer maintenance in the Department of Plant Ecology at the University of Bayreuth, Germany. For the last fifteen years he has worked on developing spatial models of ecosystem CO₂ and water balances, from stand to continental scales. These modeling approaches emphasize coupling between energy balances, ecosystem physiology, and hydrologic processes.

Jose A. R. Graça holds a PhD in forestry engineering. He is an assistant professor at the Technical University of Lisbon, Portugal. His general research interests are cork characteristics and quality and other frontier tissues of plants, such as the epidermis and peridermis. His published work is mostly on the chemistry and molecular structure of the suberin and cutin biopolymers. He has coordinated three national research and development projects on cork composition and use.

Michele Gutierrez is a professor of agricultural economics at the University of Sassari, Italy. His main research interests are forestry, agricultural economics, and the relationships between the environment and business. He is vice dean of the Agricultural Faculty of Sassari, and until 2006 he was president of the three-year major track in sciences and agricultural technology at the Agricultural Faculty of Sassari.

Richard Joffre is a researcher at the Center of Evolutionary and Functional Ecology, Montpellier, France. His research focuses on the understanding and regulation of Mediterranean terrestrial ecosystem functioning in terms of fluxes (e.g., water, carbon, nutrients). He has published seventy-five scientific articles and book chapters.

Abdelhamid Khaldi is a forest researcher at the Institut National de Recherches en Génie Rural, Eaux et Forêts, Tunis, Tunisia. He holds a forestry engineering diploma from the Ecole Nationale du Génie Rural, Eaux et Forêts, France, and a rural engineering diploma from the Institut National Agronomique de Tunisie, Tunisia. His research interests are native species (especially cork oak and pines) and their regeneration modalities. He has published extensively on the silviculture, protection, and valuation of North African forest resources.

Cathy Kurz-Besson holds a PhD in plant ecology and works as a postdoctorate fellow at the Technical University of Lisbon, Portugal. Using stable isotopes as a tool, she is interested mainly in plant water sources, rooting patterns, and adaptations to drought, especially in Mediterranean agroforestry systems.

Sidi Lofti El Alami has been a researcher in forest tree breeding at the Center of Forest Research, Morocco since 1989. Until 1995 he was responsible for the resinous section, and until 2001 he managed an electrophoresis analysis laboratory. Since then, he has been head of the program for genetic improvement of cork oak in Morocco. He has written several scientific papers related to forest tree improvement.

Unai López de Heredia is an assistant lecturer at the Forestry School of the Polytechnic University of Madrid, Spain. He is a member of the International Biogeography Society. His main interests are phylogeography and conservation of tree species in the Mediterranean basin. He has published scientific papers on phylogeography of Mediterranean oaks. Currently, he participates in projects related to population genetics and effective seed and pollen dispersal of *Fagaceae* and *Pinaceae* in Spain.

Roselyne Lumaret, research director at the Center of Evolutionary and Functional Ecology, France, is a plant population geneticist involved in research on genetic resource evaluation and conservation biology, with experience in the study of genetic variation in Mediterranean evergreen tree species and, more particularly, in oaks. She has published more than one hundred papers in peer-reviewed journals and books.

Teodoro Marañón is a researcher at the Institute of Natural Resources and Agrobiology, National Research Council, Seville, Spain. His research covers several forest ecology topics, such as regeneration ecology processes, biodiversity patterns and factors affecting them, and tree–soil interactions.

Américo M. S. Carvalho Mendes, PhD in economics (University of Arizona, USA), is an associate professor in the Faculty of Economics and Management of the Portuguese Catholic University in Porto, Portugal, and a member of the Scientific Advisory Board of the European Forest Institute for the term 2006–2010. He has been a member of the International Association of Mediterranean Forests for more than ten years. His research interests are the economics, history, and policies of the agriculture and forest sectors.

Hachemi Merouani, a specialist in seed biology, earned an MS in plant biology in 1986 from the Tizi-Ouzou University, Algeria, and a PhD on cork oak seed storage from the Faculty of Agronomy (Instituto Superior de Agronomia) of the Technical University of Lisbon, Portugal. For his PhD, he was awarded the National Innovation Prize for Forest Topics by BES in 2005 and also won the D. Leonor Lopes Fernandes Vieira Lopes award in 2008. He is author or co-author of several articles in international refereed journals.

Mahand Messaoudène is head of the Forest Research Unit at the National Institute of Forest Research, Algeria. As a forester and ecologist, he focuses his research on dendroecology, dendrochemistry, oak silviculture, and the quality of forest products, such as wood and cork.

Gregorio Montero has a PhD in forestry from the Madrid Polytechnic University, Spain. Since 2001 he has been the coordinator of the Thematic Network on Silviculture and Forest Management. From 1995 to 2005 he was the coordinator of the International Union of Forest Research Organizations Mountain Silviculture Group. He has been president of the Spanish Society on Forest Sciences since 2005 and is a member of the Italian Academy of Forestry Sciences. He has published numerous articles, books, and book chapters.

Daniel Mousain is a doctor of science and honorary research director. He was the first researcher recruited in 1973 at the French National Institute of Agronomic Research to conduct a program devoted to ectomycorrhizal symbiosis in woody forest species of the Mediterranean region. Over thirty-five years, he has coordinated many European, national, and regional R&D projects on plant–fungus interactions. He has authored more than one hundred scientific papers, reports, and conference proceedings.

Dennis O. Otieno is an assistant professor in the Department of Plant Ecology, University of Bayreuth, Germany. He has conducted research on the ecology and ecophysiology of woody and herbaceous plants in the African savannas, in Mediterranean oak woodlands of southern Europe, and in montane and alpine regions of central Europe and Asia. His current focus is on CO₂ exchange in savannas and other grassland ecosystems, and water budgets in mountain catchments.

Paola Ovando holds an MS in ecological economics and is a PhD student at the Institute for Public Goods and Policies of the Spanish National Research

Council. She is co-author of fourteen articles and book chapters on integrated environmental accounting and extended cost–benefit analysis applied to Mediterranean agroforestry systems.

José L. Oviedo holds a PhD in economics and currently works at the Institute for Public Goods and Policies of the Spanish National Research Council. He is co-author of twelve articles and book chapters on contingent valuation and choice modeling and on integrated environmental accounting applied to Mediterranean agroforestry systems.

Francisco M. Parejo is an assistant professor in the Department of Economics of the University of Extremadura, Spain. His main line of investigation is the analysis of cork products and foreign trade of Spain and Portugal in the twentieth century, a subject on which he has published several scientific works and which is the main subject of his doctoral thesis.

Marian Pérez-Devesa is a plant ecologist at the Mediterranean Centre for Environmental Studies, Valencia, Spain, and is interested in the role of forest restoration. Her main research focus is on the factors influencing establishment of subhumid tree species in Mediterranean areas.

Renaud Piazzetta is director of the Mediterranean Institute of Cork, France, an organization focused on cork oak woodlands, cork oak, and cork (www.institutduliege.com). He has worked on cork quality, cork oak woodland decline, experimental plantation monitoring, and, more broadly, technical and socioeconomic development for the cork industry in the eastern Pyrenees department and in other regions. He organizes the biennial VIVEXPO meeting on cork and Mediterranean forests.

Teresa Pinto-Correia is an associate professor at the University of Évora, Portugal, where she coordinates the Research Group on Mediterranean Ecosystems and Landscapes. She was the first president of the Portuguese Society for Landscape Ecology. She develops research on rural landscapes, their changes, changing processes, and management, including public policies and owners' decision making. She collaborates on several national and European research projects and has published widely on these topics.

Tobias Plieninger is a forest and environmental scientist and the head of an interdisciplinary Junior Research Group on Ecosystem Services at the Berlin-Brandenburg Academy of Sciences and Humanities, Germany. His research

focuses on the history, ecology, and management of European cultural landscapes. In his dissertation, he studied the impact of land uses on forest regeneration in holm oak *dehesas* in southwestern Spain.

Josep Pons is a junior researcher working at the Mediterranean Centre for Environmental Studies, Valencia, Spain. His research is focused on understanding the role of fauna in regeneration processes, including those related to acorn dispersal and predation. He has published several scientific papers on these topics.

Fernando Pulido is a plant ecologist interested in the role of biotic and abiotic interactions in shaping the geographic range of species. His main focus is on the evolutionary ecology of boreal and subtropical tree species growing in dry Mediterranean habitats.

Ana Paula Ramos is a graduate assistant at the Technical University of Lisbon, Portugal, and a PhD student in the Department of Plant Protection. Her research interests are on fungal diseases of trees, host–pathogen interactions, and fungal molecular diversity. Her published work is mostly in the diseases of forest and urban trees.

Pedro Regato holds a PhD in forest ecology and currently works as senior program manager on ecosystem management and development at the International Union for Conservation of Nature Office for Mediterranean Cooperation. He has long experience in the protection, management, and restoration of Mediterranean forest ecosystems and has worked as an associate professor in ecological restoration and forest ecology at the University Complutense of Madrid and the High Forestry School of Madrid, Spain. He has published widely on Mediterranean forest conservation.

Nuno de Almeida Ribeiro is a researcher at the Institute for Mediterranean Agrarian Sciences and professor at the University of Évora, Portugal. He has conducted research on tree growth and yield modeling, mainly in pure and mixed cork oak stands. He has developed a single tree spatial growth simulator for cork oak (CORKFITS) and is developing an ecologically based decision support system (ECCORK) for use in management decisions for cork oak stands.

Franck Richard is a researcher at the Center of Evolutionary and Functional Ecology and a lecturer at the University of Montpellier, France. His research

deals with the diversity of ectomycorrhizal fungi in Mediterranean ecosystems and their role in plant–plant interactions and plant community dynamics.

José M. D. Rosendo is the leader of the Forest Center in the Algarve, Portugal, which belongs to the General Direction of Forestry Resources. Since 1979 he has managed the forest regional department in the Algarve. He has participated in several national and international projects. From 2004 to 2006 he was the leader of the regional commission for the reforestation and recover of burnt areas in the Algarve and Baixo Alentejo.

Teresa Sauras holds a PhD in plant biology. She is a lecturer in the Plant Biology Department, University of Barcelona, Spain. Her main research interests are soil–plant relationships and mechanistic modeling of root uptake. She is investigating the nutritional needs of cork oak and physiological responses to nutritional stress.

Federico Selvi is a researcher in the Department of Plant Biology of the University of Firenze, Italy, and a professor of botany at the Faculty of Agronomy and Forestry. He has conducted research on the systematics and phylogeny of some groups of Mediterranean flora, vegetation diversity in Italy, and various related issues of biodiversity conservation. He has published more than one hundred scientific papers and two books.

Isabel Serrasolses is researcher at the Mediterranean Centre for Environmental Studies, Valencia and part-time lecturer in the Unit of Ecology of the Autonomous University of Barcelona, Spain. She has been working on soil and plant dynamics after forest fires. She has also been working on European projects concerning restoration in Mediterranean ecosystems and on cork oak restoration.

Luis Neves Silva is a graduate in forestry engineering, specializing in natural resource management. He has been the coordinator of the World Wildlife Fund Mediterranean Portuguese Forest Program since 2004 and coordinates the implementation of the Cork Oak Forest Landscapes Conservation Program in Portugal. He was auditor for the Smart Wood Program in Portugal and for plantation operations for Forest Stewardship Council certification in 2004 and 2005.

Alvaro Soto is a professor at the Forestry School, Technical University of Madrid, Spain. He specializes in forest tree genetics and genomics, gene

flow, and reproductive ecology. He is the national representative at the Stand-Forming Broadleaves Network of the European Forest Genetic Resources Program and is involved as an expert in the preparation and development of the Spanish Strategy for the Conservation and Management of Forest Genetic Resources.

Boutheina Stiti holds an MS in plant ecophysiology and works as a tenured researcher at the Institut National de Recherche en Génie Rural, Eaux et Forêts, Tunis, Tunisia. He is preparing a PhD dealing with cork oak growth. He is interested in forest regeneration and degradation problems and in growth models. He has worked on many international projects (in Spain, Japan, and Korea) and participated in many workshops and meetings.

John Tenhunen is a professor in the Department of Plant Ecology, University of Bayreuth, Germany. His research topics include management and conservation of terrestrial ecosystems, simulation models in plant ecology, carbon balances and greenhouse gas emissions, and global climate change. He has published more than 140 scientific articles, 60 book chapters, and 4 books on these topics.

Roman Trubat is a plant ecologist at the University of Alicante, Spain, interested in nursery techniques. His main focus is on plant quality as it applies to restoration ecology in semiarid Mediterranean habitats.

V. Ramon Vallejo is a permanent lecturer in plant physiology at the Faculty of Biology, Barcelona, Spain. Since 1991 he has been director of the Forest Research Program of the Mediterranean Centre for Environmental Studies, Valencia. His expertise is in the fields of soil–plant relationships, soil organic matter, forest ecology, forest fires, and land restoration. He has coordinated three European R&D projects on land restoration and published more than one hundred scientific papers.

Alberto Vilagrosa is a researcher at the Mediterranean Centre for Environmental Studies, Valencia, Spain. He has conducted research on plant ecophysiology related to drought resistance in Mediterranean species, with emphasis on plant responses to reforestation in dry and semiarid environments. He has broad experience measuring different parameters related to ecophysiological performance and adaptations to drought stress in seedlings of several Mediterranean species. He has participated in several national and European R&D projects.

Andreas Voth, PhD, is an associate professor of geography at the University of Vechta, Germany. He is continuing research in rural development in the European Union, especially in Spain. His main interests in human geography cover economic geography, tourism, protected areas, and regional development. He has published widely about agriculture and rural areas in southern Europe and Brazil.

Santiago Zapata is a professor of economic history at the University of Extremadura, Spain. He has been a member of the Group of Research on Rural History since 1975 and has published books and articles on the agricultural history of modern Spain. For the last fifteen years, his research has focused on forest history, with special emphasis on the evolution of the cork business in the second half of the twentieth century.
