MIRALLES MONTOLIO ALEJANDRO

**SUMMARY**

The course "Programming" is a subject of the first year of the Degree of Computer Engineering, which covers part of the basic matter Informatics.

This course explores the knowledge and skills in C + + programming seen on the subject "Informatics", which can be considered to be a continuation. The basic lines of the course are organized around Object Oriented Programming and Abstract Data Types and their various interrelationships. Also there will be studied by certain detail the analysis of the temporary cost of the algorithms, which allow students to decide the most appropriate algorithm for each particular problem.

The lecturers of this subject are members of the Teaching Innovation Consolidated Group in Collaborative, Cooperative and Competitive Teaching Methodologies, and they participate in the Teaching Innovation Network proposal with reference UV-SFPIE\_F013-147196.

## PREVIOUS KNOWLEDGE

### RELATIONSHIP TO OTHER SUBJECTS OF THE SAME DEGREE

There are no specified enrollment restrictions with other subjects of the curriculum.

### OTHER REQUIREMENTS

## COMPETENCES / LEARNING OUTCOMES

### 1400 - Degree in Computer Engineering

B1 - Ability to solve the mathematical problems that may arise in engineering. Ability to apply knowledge of linear algebra, differential and integral calculus, numerical methods, numerical algorithms, statistics and optimisation.

B3 - Ability to understand and master the basics of discrete mathematics, logic, algorithms and computational complexity and their application for solving problems in engineering.

B4 - Have basic skills in the use and programming of computers, operating systems, databases and computer software for use in engineering.

G8 - Knowledge of basic subject areas and technologies that serve as a basis for learning and developing new methods and technologies, and of those which provide versatility to adapt to new situations.

G9 - Ability to solve problems with initiative, decision making, autonomy and creativity. Ability to communicate and transmit the knowledge, skills and abilities of a computer engineer.

## DESCRIPTION OF CONTENTS

### 1. Introduction to the study of algorithms and complexity

- Definition of complexity and its measure.
- Information Retrieval: Search.
- The problem of array sorting. Internal sorting methods

### 2. Abstract data types

- Data Types.
- Data Structures.
- Abstract data types.

### 3. Object oriented programming

- Classes.
- Overload.
- Inheritance.
- Introduction to templates. Standard Template Library (STL).

### 4. Stacks

- Fundamentals and definition of the ADT Stack.
- Static representation.
- Dynamic representation. Pointer data type.
- Representation in STL.
- Applications.

### 5. Queues

- Fundamentals and definition of the Queue ADT.
- Static and dynamic representation.
- Representation in STL.
- Applications.

### 6. Lists

- Definition of type List with point of interest.
- Static and dynamic representation.
- Improvements in the representation of linked lists.
- Iterators.
- Representation in STL.
- Applications.

## WORKLOAD

### PRESENCIAL ACTIVITIES

Activity	Hours
Theory	30,00
Laboratory	20,00
Classroom practices	10,00
<b>Total hours</b>	<b>60,00</b>

### NON PRESENCIAL ACTIVITIES

Activity	Hours
----------	-------

Attendance at other activities	0,00
Individual or group project	29,00
Independent study and work	0,00
Preparation of lessons	46,00
Preparation for assessment activities	15,00
Resolution of case studies	0,00
<b>Total hours</b>	<b>90,00</b>

## TEACHING METHODOLOGY

Theoretical classroom activities will develop themes of the subject by providing a global view and integrating, analysing the key aspects in greater detail and greater complexity, encouraging the participation of the student body at all times. These activities are complemented with practical activities in order to apply the basic concepts and extend them with the knowledge and experience which will be acquired during the implementation of the proposed work. They include the following kinds of classroom activities:

- Classes of problems and issues in classroom
- Session for discussion and resolution of problems and exercises previously worked for the students
- Laboratory practice
- Realization of individual questionnaires for evaluation in the classroom with the presence of the teacher.

In addition to classroom activities, students must perform personal tasks (out of the classroom) on: targeted bibliographic search, issues and problems, as well as the preparation of lessons and tests. These tasks will be carried out primarily on an individual basis, in order to promote self-employment, but in addition will include jobs that require the participation of small groups of students (2-4) for capacity-building for integration into working groups.

It will use the e-learning platform (Virtual Classroom) from the University of Valencia as a medium of communication with the students. Through it have access to the materials used in class, as well as problems and exercises to solve.

## EVALUATION

The subject will be evaluated applying the following three criteria:

1) Criterion 1 (C1): Individual objective tests. Various written tests will be carried out throughout the theoretical-practical course (evaluation of skills CB02, CB04, CG01, CG06, CT03, CT05, CE02, CE06). There will be two types of tests with the following weight:

C1a (70%): Exam of the subject at the end of teaching.

C1b (30%): Intermediate controls carried out during the teaching period.

2) Criterion 2 (C2): Evaluation of the practical activities carried out both in the laboratories and in practical written exercises (evaluation of competences CB02, CB04, CG01, CG06, CT03, CT05, CE02, CE06). These tests will be carried out in groups of (maximum) 2 people and include the following activities:

C2a (70%): Evaluation of laboratory practices.

C2b (30%): Completion of practical written exercises in intermediate controls carried out during the teaching period.

3) Criterion 3 (C3): Continuous evaluation of each student, based on the participation and degree of involvement of the student in the teaching-learning process. The following aspects will be considered (evaluation of competences CB02, CB04, CG01, CT03): Resolution of exercises proposed during the teaching period; Public resolution of issues and problems discussed in class; Participation in the proposed activities.

The final grade for the subject will be calculated as the weighted average of sections C1 (70%) and C2 (30%). Criterion C3 will be considered an extra score of up to 10% over the previous grade, but only if it is greater than or equal to 4.5.

Particular considerations about the evaluation:

1) Non-recoverable sections: The criteria that evaluate the follow-up of the subject during the school period are not recoverable later. These are: C1b, C2b and C3. Criterion C2a (laboratory practices) will be recoverable, only in the 2nd call, through an individual practical exam carried out in the laboratory under conditions equivalent to those of a laboratory practice, but with a limitation of time and access to support materials.

2) Sections that require a minimum grade: To pass the subject, it is required to obtain a minimum grade of 3,5 (out of 10) in sections C1a and C2a.

3) Those students who have completed all the periodical exams of the subject (C1b, C2b) and whose weighted average score in these controls (C1b (70%), C2b (30%)) is greater than or equal to 5 will be exempted from the C1a test (final exam). Additionally, it will be necessary to have obtained a grade greater than or equal to 3 in both C1b and C2b. In these cases, the grade for section C1a will be assigned the weighted average score of the periodic intermediate controls (C1b (70%), C2b (30%)).

In any case, the evaluation of the subject will be done in accordance with the Regulations for evaluation and qualification of the University of Valencia for bachelor's and master's degrees approved by the Governing Council on May 30, 2017 (ACGUV 108/2017).

Copying or plagiarism of any activity that is part of the evaluation will result in the impossibility of passing the course, and the student will then be subject to the appropriate disciplinary procedures indicated in the

ACTION PROTOCOL FOR FRAUDULENT PRACTICES AT THE UNIVERSITY OF VALENCIA ([ACGUV 123/2020](#)).
