1402 - Degree in Telecommunications Electronic Engineering	Networks	COMPULSORY

COORDINATION

SORIANO ASENSI ANTONIO

SUMMARY

The Fundamentals of Computer Networks course is framed within the networks group of subjects. This is an introductory course focusing on the fundamentals of computer networks, required for subsequent courses that delve into network architecture and network planning.

The subject corresponds to 6 credits and is taught in the 1st semester of the 2nd year. The course has been designed with a methodology adapted to the European Higher Education Area (EHEA), and aims to focus the student learning. This method improves student involvement and supports its assessment on an ongoing basis, reinforcing and complementing the knowledge acquired in masterclasses.

The overall objective is to cover in detail the following contents: computer interconnection models, physical network infrastructure; data link layer, medium access layer; network layer and transport protocols.

PREVIOUS KNOWLEDGE**RELATIONSHIP TO OTHER SUBJECTS OF THE SAME DEGREE**

There are no specified enrollment restrictions with other subjects of the curriculum.

OTHER REQUIREMENTS

Being a second-year course, it is assumed that students already have basic knowledge in the field of engineering and have developed skills to solve problems. Also it is expected that students have learned teamwork dynamics and skills.

More specifically, it is expected that students have knowledge of binary and hexadecimal encoding, binary arithmetic and fundamentals of electronic circuits, from the matter Computing.

COMPETENCES / LEARNING OUTCOMES

1402 - Degree in Telecommunications Electronic Engineering

G3 - Acquisition of the knowledge of the basic and technological subjects that allows students to learn new methods and theories and endows them with the versatility to adapt to new situations.

G4 - Ability to solve problems with initiative, decision-making and creativity, and to communicate and transmit knowledge, abilities and skills, understanding the ethical and professional responsibility of the activity of a telecommunications technical engineer.

G5 - Knowledge to carry out measurements, calculations, assessments, evaluations, loss adjustments, studies, reports, task planning, and other analogous work in the specific field of telecommunications.

G6 - Ability in the handling of specifications, regulations and norms of compulsory compliance.

R12 - Understand and use the concepts of network architecture, protocols and communications interfaces.

R13 - Ability to differentiate the concepts of access and transport networks, circuit and packet switching networks, fixed and mobile networks, as well as distributed network systems and applications, voice, data, audio, video, interactive and multimedia services.

R14 - Understand the interconnection and routing methods of network, as well as the fundamentals of planning, sizing networks according to traffic parameters.

R6 - Ability to conceive, deploy, organize and manage telecommunications networks, systems, services and infrastructures in residential (home, urban and digital communities), business and institutional contexts, as well as understanding their economic and social impact.

DESCRIPTION OF CONTENTS

- Interconnection networking models:

Introduction

OSI, TCP / IP and hybrid models

Definition of protocol and PDU

Basic examples: MAC address, protocol ARP, IP, mask and gateway

1. Introduction

- Interconnection networking models:

Introduction

OSI, TCP / IP and hybrid models

Theory 2 (Face) 3 (No Face)

Problems 1 (Face) 1,5 (No Face)

2. Physical network modeling

- Physical infrastructure of the network:

Introduction

Transmission media. Classification and categories

Characterization of the media. Attenuation. Crosstalk. Bandwidth

Structured Cabling Standards

- Media Access Layer:

Introduction

Shared access

CSMA algorithms: CSMA / CD, CSMA / CA

IEEE 802.3, 802.11

Switch operation.

Spanning Tree Algorithm and Link Aggregation

The concept of VLANs

Trunk interfaces (IEEE 802.1q)

- Data link layer:

Introduction

Definition of frame

Overview of link layer protocols

Study checksum and CRC

PPP and HDLC

Theory 14 (Face) 21 (No Face)

Problems 5 (Face) 7,5 (No Face)

- Network Layer

Introduction

IP protocol. Headers. IPv4, IPv6

IP addressing

VLSM and summarization technique

Operation of the router. Routing tables

Fragmentation

Routing algorithms: distance vector and link state

Routing protocols internally and externally

- Transport Layer

Introduction

3. Logical modeling of the network

- Network Layer
- Introduction
- IP protocol. Headers. IPv4, IPv6
- IP addressing
- VLSM and summarization technique
- Operation of the router. Routing tables
- Port concept, process
- Basics of TCP and UDP
- Concept of NAT: static, dynamic and extended
- Theory 14 (Face) 21 (No Face)
- Problems 4 (Face) 6 (No Face)

WORKLOAD

PRESENCIAL ACTIVITIES

Activity	Hours
Theory	30,00
Laboratory	20,00
Classroom practices	10,00
Total hours	60,00

NON PRESENCIAL ACTIVITIES

Activity	Hours
Attendance at other activities	0,00
Individual or group project	18,00
Independent study and work	22,00
Preparation of lessons	30,00
Preparation for assessment activities	20,00
Resolution of case studies	0,00
Total hours	90,00

TEACHING METHODOLOGY

The training activities are conducted in accordance with the following distribution:

40% of the hours of ECTS credits (1 credit is 25 hours) will go to the following sessions:

- Activities theory. (G-3, G-4, R-6, R-12, R-13, R-14)

Description: The lectures will develop the issues by providing a global and inclusive vision, analyzing in detail the key issues and more complex, encouraging at all times, participation / student.

- Practical activities. (G-5, G-6, R-6, R-12, R-13, R-14)

Description: Complementing theoretical activities in order to apply the basics and expand the knowledge and experience to be acquired in the course of the work proposed. They include the following types of classroom activities: Classes of problems and issues in classroom discussion sessions and problem-solving exercises and previously worked by students laboratory practice oral presentations, conferences, tutorials scheduled (individualized or group)

- Evaluation. (G-3, G-4, G-5, G-6, R-6, R-12, R-13, R-14)

Description: Implementation of individual evaluation questionnaires in the classroom with the presence of teachers.

60% of the hours of ECTS (25 hours per ECTS) will be devoted to the following non-contact activities:

- Work in small groups. (G-3, G-4, G-5, G-6, R-6, R-12, R-13, R-14)

Description: Realization, by small groups of students (2-4) of work, issues, problems outside the

classroom. This work complements the work and encourages individual ability to integrate into working groups.

- Working staff / student. (G-3, G-4, G-5, G-6, R-6, R-12, R-13, R-14)

Description: Realization (outside the classroom) of monographs, literature search directed, issues and problems as well as the preparation of classes and exams (study). This is done individually and tries to promote self-employment.

The platform of e-learning (virtual classroom) of the University of Valencia will be used in support of communication with students. Through it you will have access to course materials used in class as well as solve problems and exercises. Also, we will use the platform from Cisco Systems to follow the certification with similar content to this course.

EVALUATION

The course will be evaluated as follows, in Continuous Evaluation:

1) Theoretical (60%)

- Final written exam (35%, FINAL)
- Realization of on-line questionnaires through the semester (10%, ONLINE)
- Completion of one or two short duration tests throughout the semester, consisting of one or more tests with theoretical-practical questions as well as problems. (15%, PARTIAL)

2) Laboratory (30%)

- Attendance, preparation (brief summary, notes, etc) and conduct of the practice being evaluated in the same laboratory (10%, ATTENDANCE)
- Practical skills assessment related to laboratory activities (5%, PTSA)
- Test with multiple choice and/or short answers made on the final exam (15%, EXAM-LAB)
- If the EXAM-LAB mark is higher than ATTENDANCE, the ATTENDANCE mark will be that achieved in EXAM-LAB.

3) Creation and presentation of work and exercises proposed by the teacher (10%) with the following methods:

- Assessment of practical activities from the preparation of papers / reports and / or oral presentations.
- Continuous assessment of each student based on participation and involvement of the students in the teaching-learning process, taking into account regular attendance provided onsite activities and resolution of issues and problems raised.

The fulfillment of all these requirements is required in order to pass the course:

- Average mark equal or higher than 5.
- FINAL exam must be graded at least with 4.
- EXAM-LAB must be graded at least with 4.

In case you fail on first call, and provided that the minimum mark of any of the parts is passed, the grades of said part may be saved for the second call, except in the case you take again the corresponding test. On second call, both the FINAL and PARTIAL are evaluated together with a total weight of 50%. On second call, it will still be necessary to fulfill the same minimum and average grade requirements as on first call.

Homeworks are compulsory. In case they have been done in a group, all the members should appear in the report submitted in `aulavirtual` or in paper if it was the case. Unless otherwise stated, all documents submitted in `aulavirtual` will be in pdf format.
