TEACHING METHODOLOGY

The course on foreign trade is divided into two parts: a theoretical part and a practical part. This division means to facilitate the students to assimilate the basic issues of foreign trade management linking them to real or realistic case studies with actual foreign trade operations, export documents, transport, documentary credit, etc... Therefore, most of the topics have one or two practices related to them to reinforce the theoretical material and illustrate the applicability of the acquired knowledge to real cases.

The theoretical classes are intended to provide students with the information and conceptual tools necessary for understanding the internationalization process of a company, whether in the form of exports or as establishing abroad. Classes will be devoted to the fundamental contents of the theoretical program, delving into those aspects that are more difficult.

The practical program of this course is closely related to the theoretical content and is an essential part of the course. Its aims is to strengthen the basic concepts acquired, promote the application of knowledge to different real-world situations and develop the capacity of reasoning and analysis, and student autonomy. Some of the practical activities will be developed in-group while others individually.

To this end, the course is built around several types of practices, the common denominator will be the completion of a practical questionnaire for each of the proposed practices. So, we have the "discussion" practice in which students will read a document or article to be discussed in class. Another type of practice is the "interactive" practice in which the students will gather information on their own through the Internet or other media on issues related to the practical case. With this information at hand, the student should be able to complete the corresponding questionnaire in the classroom. In other cases we will deliver foreign trade documents, such as the import or export document, and the student should process those documents based on a real practical case that will be proposed in class. There is another type of consisting on watching a documentary (youtube or similar) in class and respond to a questionnaire. Another type of practice is the practice "role" in which several students have to take on certain roles. An example of this type of practice is drafting an international contract in which students have information of a possible operation of international trade that should translate into a contract in which one student assumes the role of exporter and the other importer. It is interesting to note the practice "visit" in which we visit a trade facility, such as the Port of Valencia, a customs warehouse or the Fair of Valencia and in which we explain the operating institution. Finally, in other cases also have practice "conference" in which the representative of a company or institution (IVACE or the Tax Office) delivers a talk where the students take notes to

answer the questionnaire.

All materials available to students will be regularly in the Aulavirtual. Also, any relevant information practices, ads, etc., will also be available to students in the

EVALUATION

Theoretical part: A written exam of the theoretical part of the course (duration 1-2 hours) which corresponds to 60% of the final grade. The student must obtain a minimum (2.8 out of 6) in this part for an average of the theoretical and practical parts.

Practical part: Continuous evaluation through weekly practical questionnaires of final written exam for the practical part. This part represents 40% of the final grade. Questionnaires are NOT recoverable (except where indicated otherwise) in accordance with Art. 6.5 del Reglament d'Avaluació i qualificació de la Universitat de València per a títols de Grau i Màster (Consell de Govern 30-5-2017, ACGUV 108/2017).
