SUMMARY

The ***Economic Environment and Legal Framework*** subject is part of the first semester of the academic year. The courses that make up this subject are as follows: *Insurance Law and Ethical Standards*, ***Insurance Accounting***, *Economics of Social Security*, and *Taxation of Insurance and Financial Operations*.

Its placement reflects the educational importance of the subject at the start of the academic curriculum, as it helps position the area of study within the economic environment and legal framework in which it operates and interacts. This foundation allows for the broadening of knowledge that will be applied transversally in future coursework.

In this regard, the courses within the subject are related to content covered in several courses from other subject areas. Beyond serving as a foundation for subsequent developments, the subject is also professionally useful, as some of the knowledge and skills acquired are directly applicable in professional practice.

With regard to the course ***Insurance Accounting***, it introduces students to the accounting challenges of insurance entities. The study of accounting for insurance entities begins with the objectives and specific characteristics of insurance activity, and from this perspective, examines the most important groups of

operations:

- The process of issuing, managing, and collecting premium receipts.
- The process of paying out claims.
- The periodization of premiums and claims leads to the establishment of technical provisions.
- The use of risk diversification mechanisms, primarily reinsurance.
- The study of insurance accounting concludes with an overview of the annual accounts, emphasizing the importance of covering technical reserves and maintaining the solvency margin.

This course continues with the subject *Risk Control and Solvency*, particularly in the course *Accounting and Analysis of Financial Entities*, where knowledge is further expanded.

PREVIOUS KNOWLEDGE

RELATIONSHIP TO OTHER SUBJECTS OF THE SAME DEGREE

There are no specified enrollment restrictions with other subjects of the curriculum.

OTHER REQUIREMENTS

To successfully learn the contents of this course, the student should be familiar with the typical topics of Financial Economics and Accounting commonly taught in Social Sciences programs, as well as have basic proficiency in using Microsoft Excel.

COMPETENCES / LEARNING OUTCOMES

-

Ser capaces de interpretar las cuentas y los estados financieros de las empresas aseguradoras y de las instituciones financieras en general.

Students should apply acquired knowledge to solve problems in unfamiliar contexts within their field of study, including multidisciplinary scenarios.

Students should be able to integrate knowledge and address the complexity of making informed judgments based on incomplete or limited information, including reflections on the social and ethical responsibilities associated with the application of their knowledge and judgments.

Students should demonstrate self-directed learning skills for continued academic growth.

DESCRIPTION OF CONTENTS

1. THE INSURANCE COMPANY

1. Characteristics of the insurance company
2. Regulatory legal framework
3. Adaptation rules of the Accounting Plan for Insurance Entities
4. Legal forms of insurance entities. Accounting for initial financing

2. ECONOMIC AND ACCOUNTING ANALYSIS OF INCOME, BENEFITS, AND EXPENSES

1. Configuration of the commercial premium: risk premium, management expenses, and safety margin. Premium surcharges
2. Issuance, collection, and cancellation of premium receipts
3. Commissions accrued by intermediaries. Advanced commissions
4. Accrued but unissued premiums. Fractional and fractioned premiums. Premium refunds
5. Provisions for premiums pending collection
6. Benefits in life insurance: maturities, capital, annuities, redemptions, and profit sharing. Advances
7. Benefits in non-life insurance. Claims settlement agreements

3. ACCRUAL OF INCOME AND EXPENSES: TECHNICAL PROVISIONS

1. Accrual of income: provisions for unearned premiums and ongoing risks, and mathematical provisions for life insurance
2. Accrual of expenses: provisions for pending claims (unpaid, to be settled, or declared) and provision for settlement expenses
3. Other technical provisions

4. RISK DIVERSIFICATION: REINSURANCE AND CO-INSURANCE

1. Reinsurance and its types. Risk and claims reinsurance
2. Ceded and retroceded reinsurance. Deposits received
3. Accepted reinsurance. Deposits constituted
4. Co-insurance contracts. Recording of ceded and accepted co-insurance

5. ANNUAL ACCOUNTS: BALANCE SHEET AND PROFIT AND LOSS ACCOUNT

1. Accounting obligations of insurance entities
2. The balance sheet and its structure
3. Structure of the profit and loss account: technical and non-technical account

WORKLOAD

PRESENCIAL ACTIVITIES

Activity	Hours
Theory	15,00
Classroom practices	15,00
Total hours	30,00

NON PRESENCIAL ACTIVITIES

Activity	Hours
Attendance at other activities	0,00
Individual or group project	15,00
Independent study and work	30,00
Preparation of lessons	0,00
Preparation for assessment activities	0,00
Resolution of case studies	0,00
Total hours	45,00

TEACHING METHODOLOGY

Throughout the course, the program content will be covered, combining theoretical content with practical exercises and case studies. Various assignments will be proposed, which students must submit in the manner and by the deadlines specified during the course. To this end, depending on the needs of each case, all available resources (blackboard, transparencies, projector, computer, etc.) considered most appropriate for achieving the proposed objectives will be used.

In general, classes will combine lecture-based teaching with problem-solving and practical activities. On the one hand, the instructor will highlight the key aspects of each topic and guide the study through relevant bibliography, which must necessarily be consulted to complete and deepen understanding of the subject. On the other hand, practical activities will involve posing questions and exercises of an applied nature within the field of accounting, taking into account the economic environment and legal framework involved. Students will be expected to solve these, including, where appropriate, discussion of the solutions and the use of suitable computer tools.

In addition to these in-person activities, students will also be required to undertake autonomous learning tasks, such as individual study, preparation for assessments, and the completion of individual or group projects. To successfully carry out these tasks, tutoring¿whether individual or in groups¿is a particularly valuable teaching resource, as it allows the instructor to gauge the group's progress and provides students with personalized guidance in their training program. Therefore, the use of this educational resource is recommended and encouraged throughout the course.

Teaching materials will be accessible through the virtual classroom: <http://aulavirtual.uv.es>

EVALUATION

In general, the procedure for evaluating the competencies of the subjects is similar to that of the rest of the courses within the discipline and, specifically, will follow the following guidelines:

A **written exam**, which may include both theoretical questions and practical problems or real-life cases (this will account for between 60% and 80% of the final grade). A **minimum score of 5 out of 10** must be obtained on this written exam for it to be counted toward the final grade.

An **evaluation of the practical activities** carried out by the student, based on the preparation of assignments/reports/tests and/or oral presentations, including the defense of the positions developed. In order for the activities and tasks to be assessed, they must be submitted on the date and in the manner stipulated for each of them.

Continuous assessment, based on class attendance and participation in other face-to-face learning activities, as well as active involvement in the teaching-learning process.

To pass the subject, a **minimum overall grade of 5 out of 10** is required.
