SUMMARY

Service-Dominant (S-D) logic has emphasized the centrality of service in marketing and management and suggests that the theories and models are applicable to all of marketing, including the subset of instances in which goods are involved (Gummesson, 2017; Vargo & Lusch, 2017). According to S-D logic, all providers are service providers, and service is the fundamental basis of exchange. Contemporary marketing emphasizes the role of creating customer value as a focal issue in marketing. The goal for marketing is to engage the supplier with significant customer practices and contribute to value creation in those practices, in a mutually beneficial way (Grönroos & Ravald, 2011). We need to analyse service research priorities for a more sustainable future (Karpen et al., 2023).

This module examines these practices within the view of value co-creation, offering iMBA students theoretical and practical strategic and operational options in service marketing management. Furthermore, this module will consider the new trends in marketing and its implications in service marketing and management. Rust (2019) emphasizes the expansion of relationships and service as a trend that will continue to shape the future of marketing. Advancements in information and communication technologies have expanded businesses' ability to communicate with customers, store customer information, and analyse customer information. In the future, artificial intelligence (AI) appears likely to influence marketing

strategies, including business models, sales processes, and customer service options, as well as customer behaviours (Davenport et al., 2020).
